Innovating Energy Technology

FUJI SERVO SYSTEM ALPHA7

"Strong" motor with "Speedy"
response maximizes the productivity!

24C1-E-0132b

The dramatically evolved control functions significantly increase the productivity

To gain the maximum advantage of constantly evolving high-tech industrial equipment, a servo system with high responsiveness and high precision is essential. With its dramatically evolved control functions, Fuji Servo System ALPHA7 raises the speed and precision of drive control to the highest level in the industry. It supports a broad range of monitoring functions and has reached the next level of safety. It meets the highest level of customer requirements for productivity improvement, cost reduction, and safety.

Speed and Frequency Response

3.2 kHz

Speedy response realizes ultra-high-speed control

Maximum Instantaneous Torque

350 %

Power of three and half fold of the rating enables response to high-speed commands

INC/ABS

24 bit (16777216 pulses)

Fine resolution encoder further raises the precision of control

Safety

STO

(Safe Torque Off)

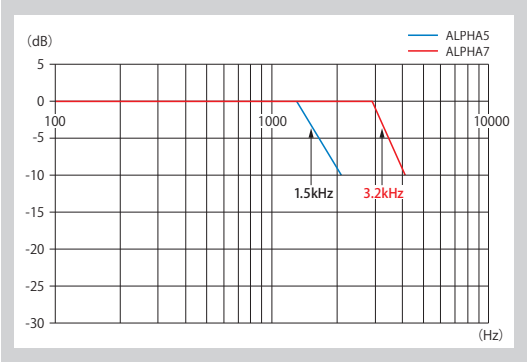
Standard Equipment

Supports SS1, SLS, SBC, and SSM among others and provides higher safety

High-speed and high-precision control is realized by the basic performance at the highest level in the industry

Speed and frequency response at 3.2kHz realizes ultra-high-speed control

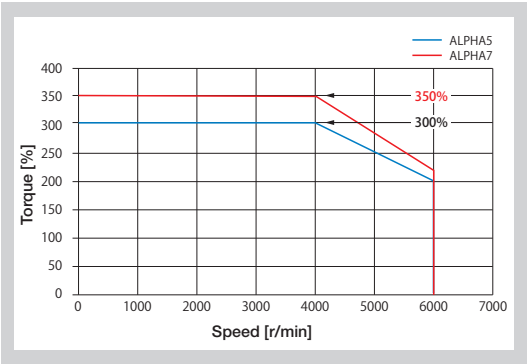
Fuji's proprietary control algorithm achieves a speed and frequency response at 3.2kHz, the highest level in the industry. This reduces the tact time, enabling high-speed control.



Maximum instantaneous torque of 350%* enables response to high-speed commands

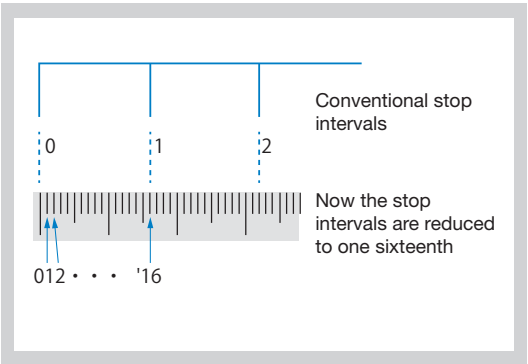
The maximum instantaneous torque of the servo motor is now as high as 350%.

* This is applicable only to certain models.



The 24-bit fine resolution INC/ABS encoder significantly improves the precision of control

The encoder resolution is now as high as 24 bits. This provides much higher control precision than before, enabling high-precision control.

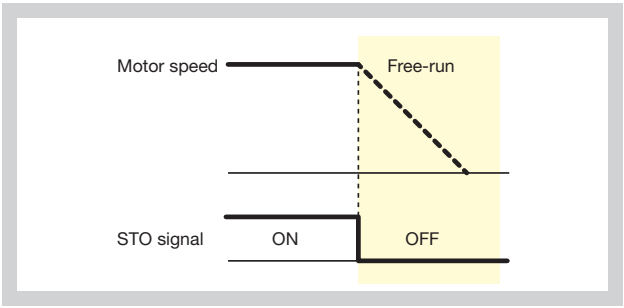


Safer operations are ensured by various safety functions

Standard equipment includes the STO function defined in the international standard IEC61800-5-2. In addition, the WSU-ST1 option adds support for SS1, SLS, SBC, and SSM. These safety functions can be easily configured with parameters.

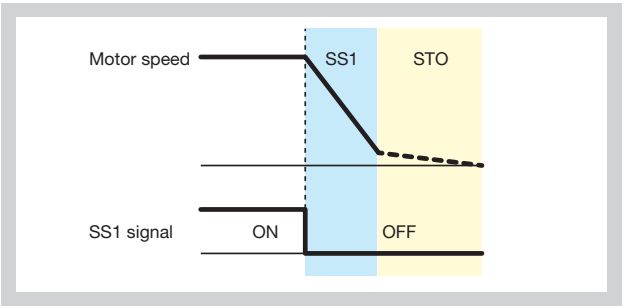
Equipped as standard with STO (Safe Torque Off)

Upon receiving an input signal from external equipment, the servo system shuts off the output from the servo amplifier and enters into free-run mode.



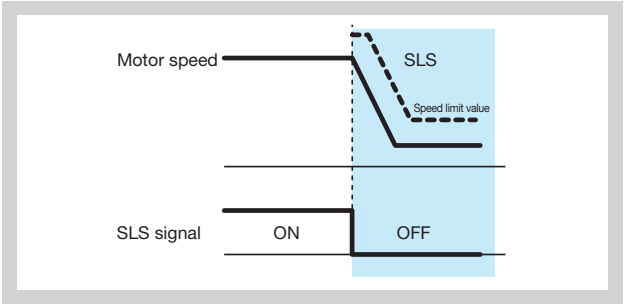
Support for SS1 (Safe Stop 1) *Option

Receiving an input signal from external equipment, the servo system operates the STO function when the speed is reduced to the specified value or the specified period of time elapses.



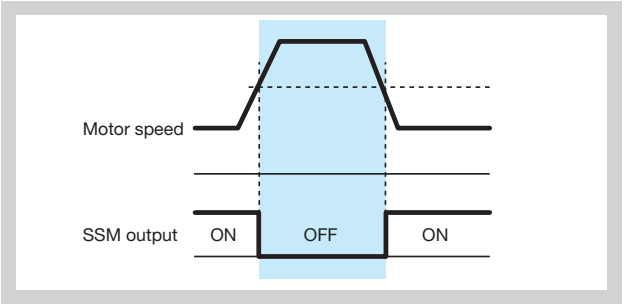
Support for SLS (Safely Limited Speed) *Option

The servo system monitors whether or not the speed limit value is exceeded and, if exceeded, enters into STO mode.



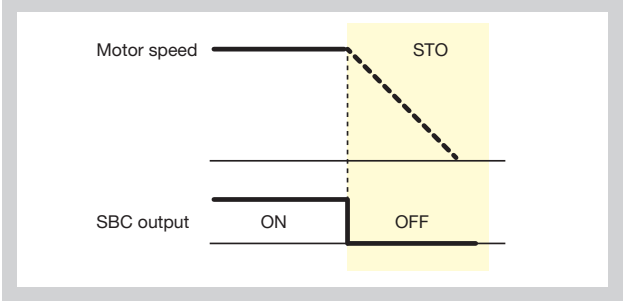
Support for SSM (Safe Speed Monitor) *Option

The servo system outputs the SSM signal when the specified speed is exceeded.



Support for SBC (Safe Brake Control) *Option

The SBC signal is an output signal for controlling an external brake and operates synchronously with STO.



For stable operation of the equipment

Compliance with the SEMI-F47 standard for semiconductor and liquid crystal manufacturing equipment

Lineup of Products That Constitute an ALPHA7 System

Servomotor

Model	Rated speed (Max. speed)	Power supply	Rated output	Servomotor type		Protective construction	Encoder	Type
				Without brake	With brake			
 GYS motor Ultra-low Inertia	3000r/min (0.75kW or lower: 6000r/min 1.0kW or higher: 5000r/min)	200V series	11 types 0.05 to 5.0kW	●	●	IP67*1	24-bit ABS	GYS***D7-EB2 (-B)

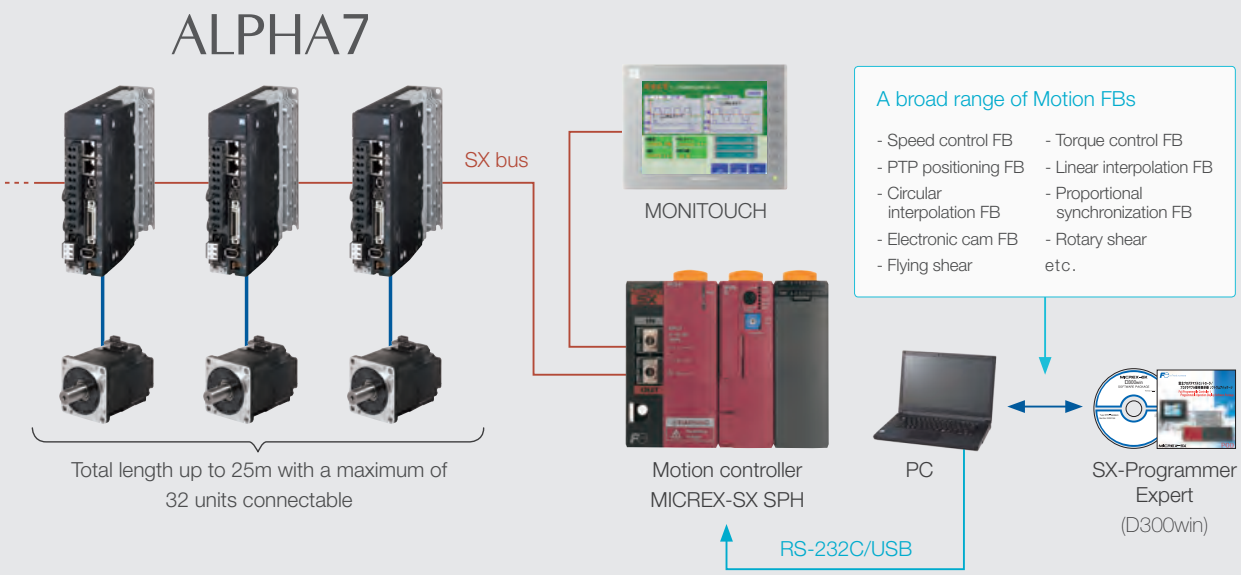
An example system configuration that uses ALPHA7

High-speed serial bus (compatible with SX bus) VS/LS Types

You can easily build a highly functional motion control system that includes synchronous and interpolation control.

▶For information on a motion control system, see the catalog [24C1-J-0086].



Gain the maximum advantage of ALPHA7 with optional peripheral equipment and software

Motion controller

MICREX-SX

High-speed processing enables the control of constantly evolving high-tech machines

It is possible to perform high-speed processing with a program scan cycle as fast as 0.25ms and I/O refreshing at intervals of 1ms (8192 points). You can build a particular motion control system in a short time by choosing from the rich set of FBs (function blocks) and appropriately combining FBs.

MICREX-SX SPH

Programmable operation display

MONITOUCH V9 series

Provides an intuitive user interface and yet the ability of remote control in a network environment

Supports the VNC server functionality and allows you to remotely monitor and operate MONITOUCH installed at the field from your tablet PC. If an Internet connection environment is available, you can easily implement remote connections in a secure VPN environment.

MONITOUCH

Version upgrade of SX-Programmer Expert (D300win)*

Dedicated software that enables speedy initial setup

The "Multi-axis trace" feature allows you to monitor multiple axes from a single screen

You no longer have to open one screen for each axis when monitoring the servo operation status. Now you can monitor all the axes from a single screen, thereby being able to configure the operation settings more efficiently.

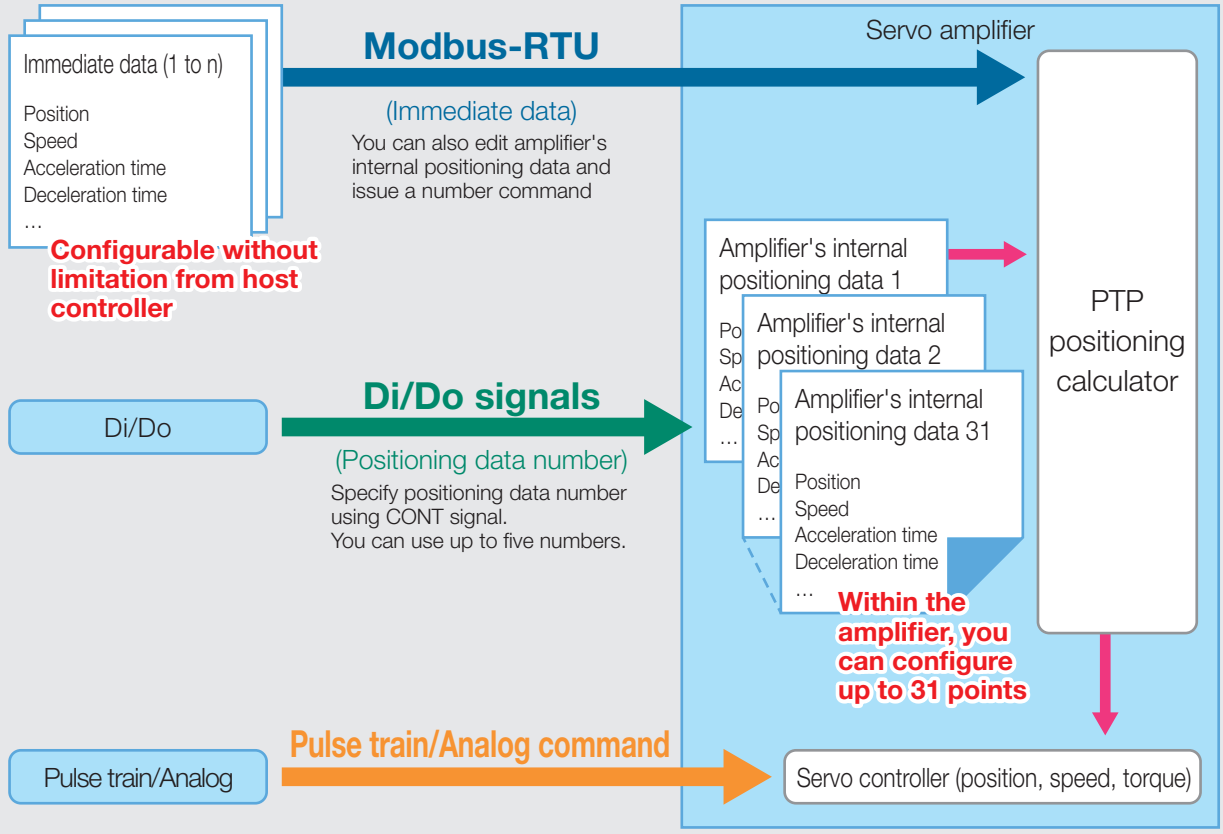
The "Multi-axis parameter edit" feature allows you to adjust up to 32 axes at the same time

You no longer have to configure or adjust parameters separately for each axis. Now you can configure or adjust them for up to 32 axes at the same time.

* See Page 10.

General-purpose interface VV Type

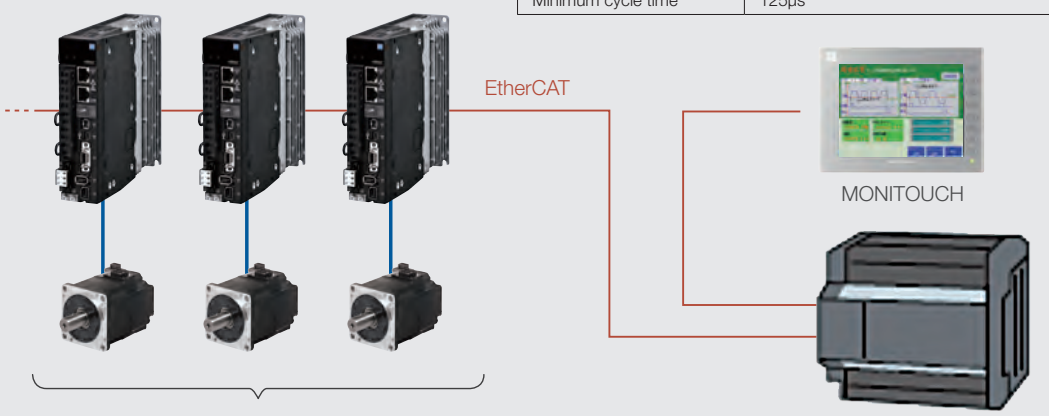
A single unit allows - Positioning run (immediate data operation) based on Modbus-RTU
- Positioning run (with 31 positioning data points) based on Di/Do signals
- Position, speed, and torque control run based on pulse train/analog input



Open Network (with support for EtherCAT) VC Type

EtherCAT applications (with support for six different control modes and for synchronous (DC, SM2) and asynchronous (FreeRUN) modes)

Device profile	CoE (Can application over EtherCAT)
Supported control modes	pp, pv, hm, csp, csv, cst
Synchronous mode	DC (synchronous), SM2 (synchronous), FreeRUN (asynchronous)
Minimum cycle time	125μs

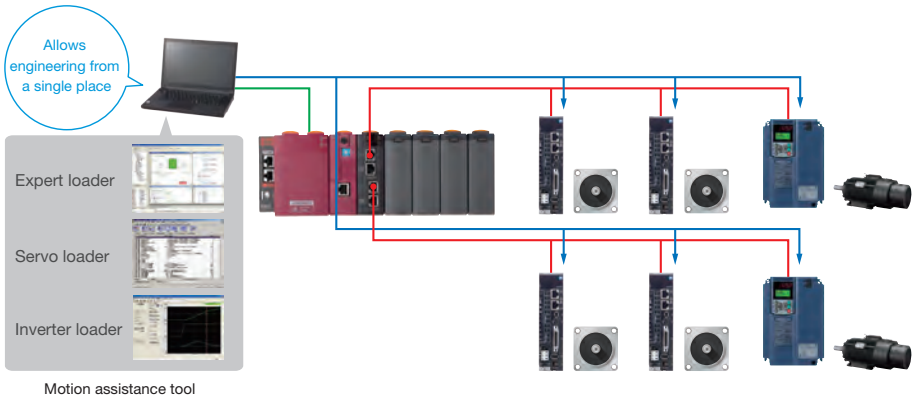


Build and tune your system more easily and speedily

Maximize performance by using MICREX-SX in conjunction

Transparent communication allows you to configure multiple amplifiers from a single central location

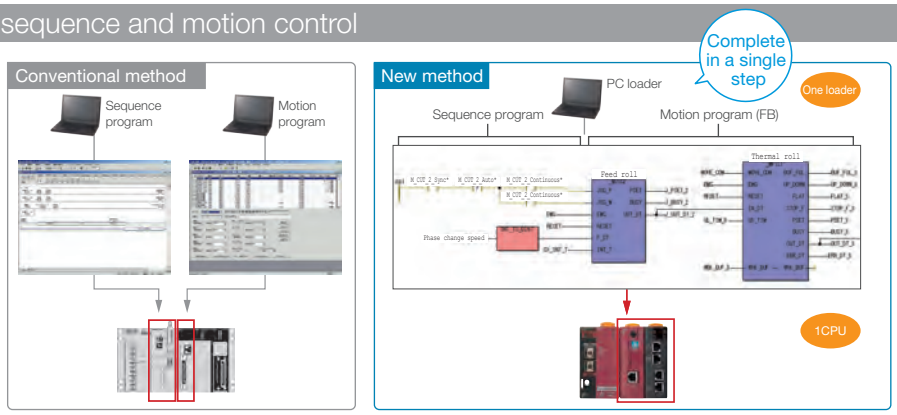
You can use the transparent communication feature to configure the parameters of multiple servo amplifiers from a single PC via the motion controller. In addition, connection with Fuji's MONITOUCH allows Wi-Fi communications with servo amplifiers.



A single CPU performs both sequence and motion control

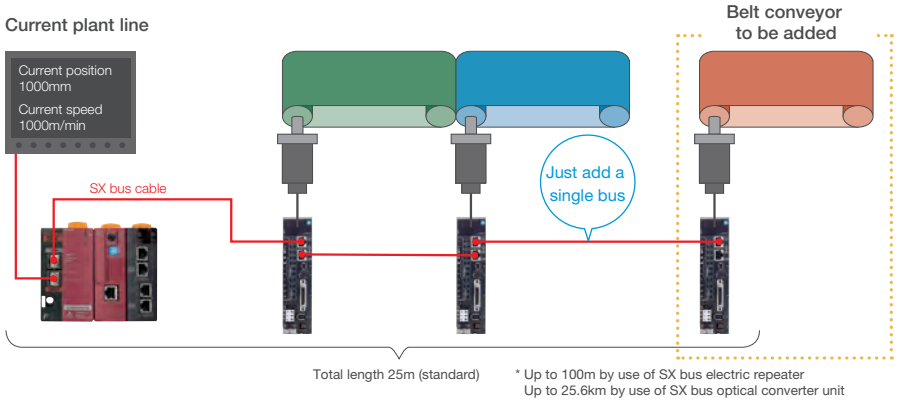
Adding a single unit of MICREX-SX eliminates the need of a module dedicated to motion control, thus significantly reducing the initial cost. Also, work efficiency is dramatically improved by supporting both sequence and motion with a single programming tool*.

*SX-Programmer Expert (D300win)



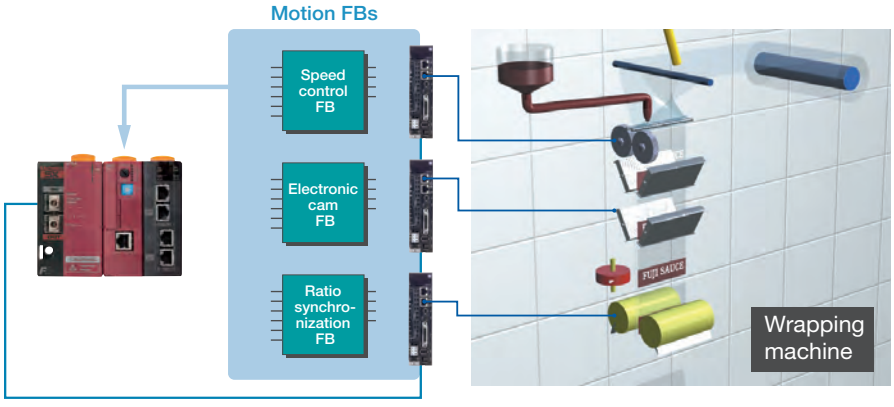
Directly connectable with a single SX bus and easy to wire and extend

Just a single bus cable completes the connection between the controller and servo. When you add an additional control axis to allow for the extension of the machine, you can connect it in a one-touch fashion using a bus cable.



Broad range of functional software "FBs" raises development efficiency

Various software parts, FBs (function blocks), are available free of charge. By appropriately combining FBs, you can build a motion program for a large-scale system in a short time. If you have trouble in developing programs, consult Fuji for support.



Various features that allow standalone use of ALPHA7

PC loader tuning allows easy semi-automatic adjustment

Automatic servo adjustment in tuningless mode

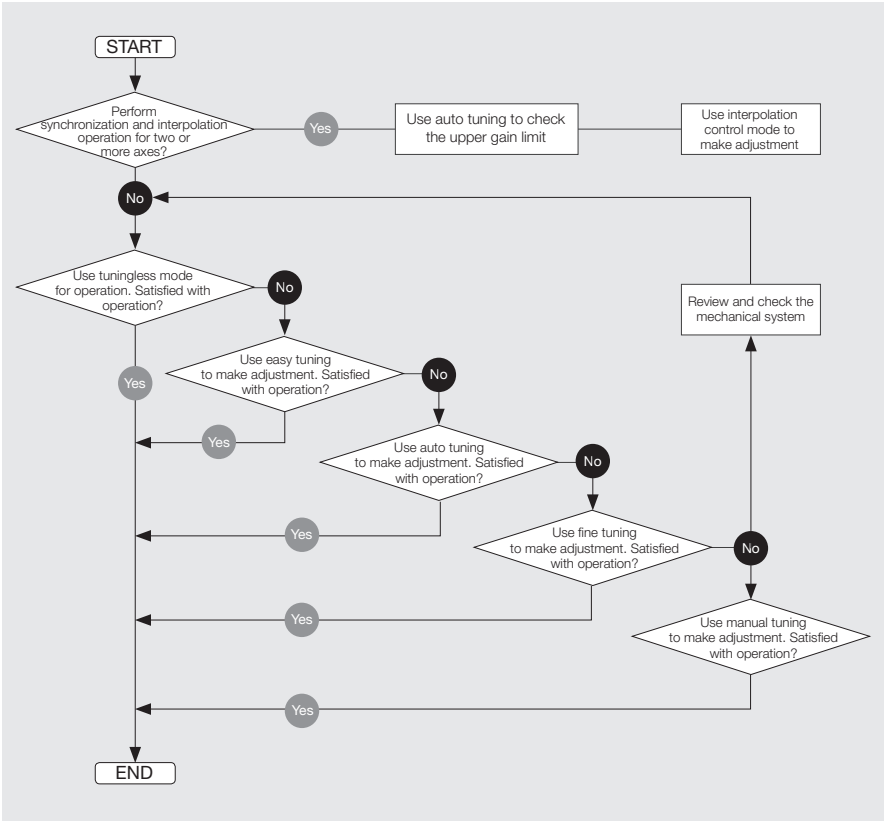
In tuningless mode, you do not have to manually adjust the responsiveness (gain) because the servo system automatically does so. You no longer spend time on tuning at start-up time.

Finer adjustment is possible in auto tuning mode

In auto tuning mode, the servo amplifier automatically adjust the responsiveness (gain). This mode allows finer control than tuningless mode.

Highest precision requirements can be achieved in manual tuning mode

This mode is intended for use with machines that require high precision. It allows you to optimize multiple parameters at once, enabling high responsiveness (gain) adjustment.



Features that reduce the time required to set up a newly introduced machine

Test-run the machine before completion of a program using the pattern run feature

You can adjust the machine and servo before completion of a program for the controller.

Test-run a program before completion of the machine using sequence mode

You can run a controller program before completion of the machine, so you can debug programs more efficiently.

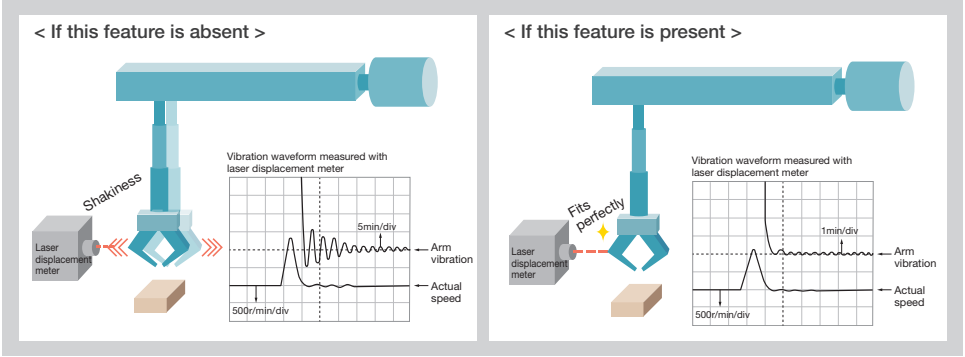
Simplify your system using the built-in programmable positioning feature (applicable to the LS type only)

You can easily perform positioning run, using pre-registered positioning data. You can register positioning data for up to 31 points in VV type and up to 99 points in LS type. You can run the system by just selecting a program number and issuing a start command from the host controller. This feature is most useful for the purposes of inching and repetitive operations.

Evolved control functions contribute to streamlining of operation and stabilization of quality

New damping control suppresses the vibration at equipment edges

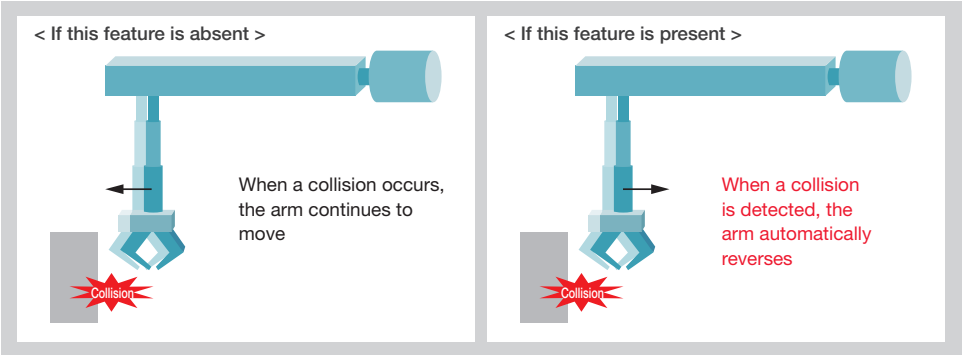
The introduction of a new control algorithm reduces the vibration at the edges of the equipment to one tenth, compared with the conventional damping control (used in our products). Support for models with three inertia systems makes it possible to control low-frequency vibrations at two points concurrently.



The interference detection feature detects a collision, etc. and prevents breakage

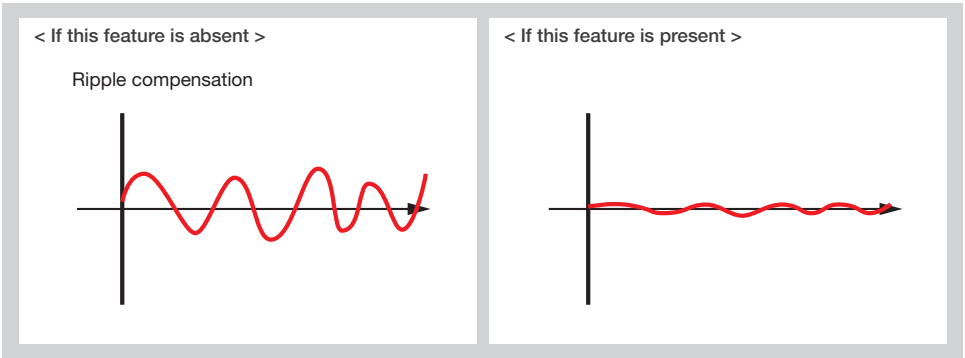
The servo amplifier detects interference on the equipment (such as a collision with an edge of the machine) and operates to mitigate the shock to the machine when a collision occurs. This feature helps prevent damage to the equipment and reduce load on it.

* Protection may not be complete depending on the operation type.



The cogging feature ensures smooth operation

Since interference due to cogging of the servomotor is detected and compensated, speed ripples due to cogging can be reduced and smooth operation can be ensured even if the equipment does not support the increase of the speed loop gain.



Maximum input pulse frequency of 4MHz

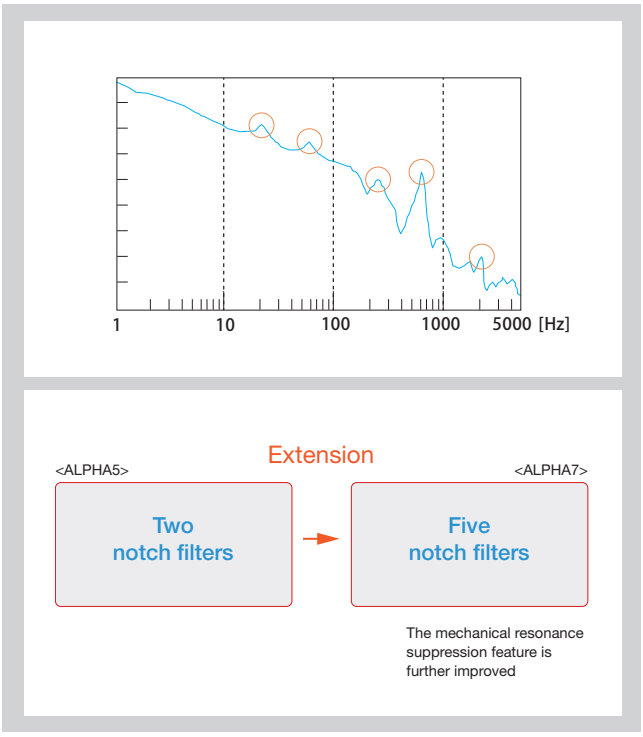
The system can support input frequencies from the host controller until the maximum frequency of 4MHz is reached.
This allows a finer amount of travel per pulse, thus enabling positioning operation at a higher precision than before.

- Differential input: Max. input frequency ≤ 4.0 [MHz]
- Open collector input: Max. input frequency ≤ 200 [kHz]

However, the VS type supports only the counter feature and it cannot support pulse train operation.

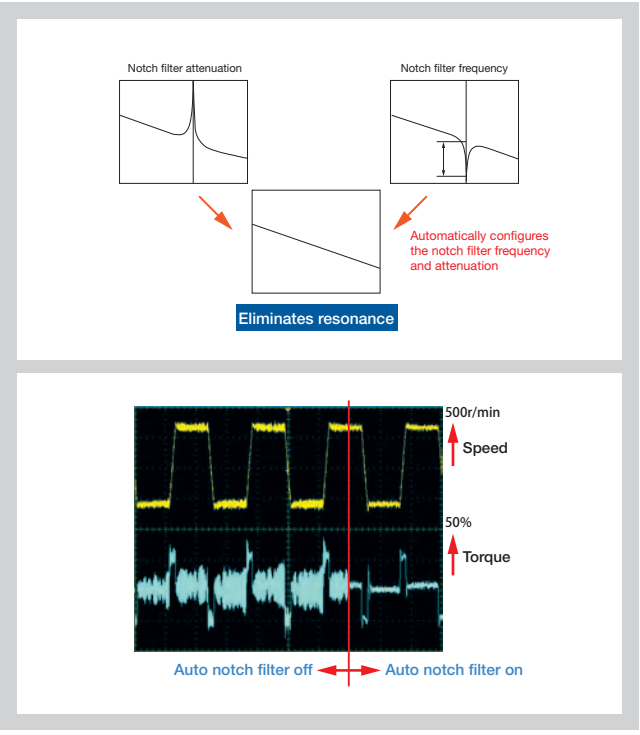
The notch filter feature suppresses the resonance of the machine

Now five notch filters are incorporated instead of two, further improving the machine resonance suppression feature.



The motor status can be monitored from the host controller

The system detects machine resonance and automatically configures the notch filters. While the auto notch filter feature is on, the system constantly performs detection and calculation, thus being able to respond even to moment-to-moment changes in resonant frequency.



One of three motor stop methods can be selected

You can select "rapid deceleration stop", "DB stop", or "coast-to-stop" when an alarm occurs, when the main power is off, or when the servo-on signal is off. Since limiting output torque at desired value is possible even if rapid deceleration stop is selected, impact shock to the machine can be reduced.*

* However, it is enabled when the control power supply is input.

A homing program can be easily configured

Several homing features allow simple configuration by just combining servo parameters.

Interrupt positioning feature (except for EtherCAT type)

You can easily perform positioning run, using pre-registered positioning data. You can register positioning data for up to 31 points in VV type and up to 99 points in LS type. You can run the system by just selecting a program number and issuing a start command from the host controller. This feature is most useful for the purposes of inching and repetitive operations.

Design and features that reduce the labor of maintenance

Easily analyze the cause of alarm occurrence

When an alarm occurs, the system displays the content of the alarm as well as related data such as the speed and torque at the time of alarm occurrence. This allows you to accurately analyze the cause of the alarm.

Life prediction and preventive maintenance features

You can check the status of the servomotor from the controller, so you can perform maintenance at appropriate time. In addition, the system predicts the life for the following consumables and sends the data to the host controller for proactive failure prevention.

Battery | Main circuit capacitor | Cooling fan

Long life design of servo amplifier parts

The design life of long-life parts has been further extended: 10 years for electrolytic capacitors and cooling fans. In addition, the design life of the battery is approximately 35,000 hours. (Retention time with the power supply shut off)

* The use conditions are as follows.
  - Ambient temperature: 30°C (annual average)
  - Load factor: Up to 80%
  - Rate of operation: Up to 20 hours/day

The environmentally resistant servo motor can be used in an environment with exposure to water and dust

The servomotor is by default compliant with IP67* defined by the International Electrotechnical Commission (IEC). It has Class 6 dust resistance and Class 7 water resistance, which means that it can be used in an environment with exposure to water and dust.

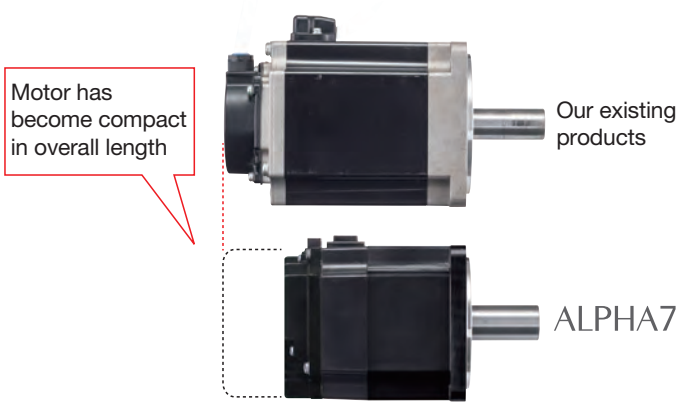
* Except for shaft-through part (also except connectors for GYS and GYB motors of lead wire type).

Space-saving design that allows installation in a small space

Most compact in the industry* Further miniaturized servomotor

The overall length of the servomotor has been reduced by approximately 15mm, compared with our existing products. This is the most advanced miniaturization in the industry.

* As of February 2017, for the GYB motor



(In comparison with GYB 0.2kW)

Compact servo amplifier that can be mounted in close contact

The servo amplifier is reduced in width by 5mm and in footprint area by approximately 12%* when compared with our conventional model. It can be mounted in close contact, allowing the reduction of the space required to mount it on the control panel of the machine.

* When mounted in close contact, 80% ED rating applies. There is no restriction when installed at spacings of 5mm or greater.
* Comparison value with frame 1.

Support for various standards is provided by default to allow for overseas business expansion

Compliance with overseas standards and laws

The ALPHA7 series supports international standards.

Standards and laws		Servo amplifier	Servomotor
CE mark	Low voltage directive	EN61800-5-1	
	EMC directive	EN61800-3	
	Machine directive	ENISO13849-1 Cat3.PL-e	Not applicable
		EN60204-1 Stop Category 0

TÜV SÜD: An independent certification organization based in Germany

TÜV Rheinland: An independent certification organization based in Germany

KC: Korea's nationally integrated certification mark

By default compliant with RoHS*1

Compliant with RoHS (EU's Restriction of Hazardous Substances) and China RoHS (Management Methods for Controlling Pollution by Electronic Information Products). Environment-friendly design that restricts the use of six hazardous substances*2.

RoHS directive compliance
EU's Restriction of Hazardous Substances

*1: EU's Restriction of Hazardous Substances

*2: Lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyl (PBB), polybrominated diphenyl ether (PBDE)

Harmonic suppression

All models of servo amplifiers used by specific consumers are subject to the "Japanese Guideline for Suppressing Harmonics by Customers Receiving High Voltage or Special High Voltage". All users required to apply guidelines must calculate equivalent capacity as well as harmonic outflow current based on these guidelines, and take appropriate measures if the calculated harmonic current exceeds the limit stipulated for the contracted wattage.

Circuit classification	Circuit type	Reactor	Conversion factor
3	3-phase bridge (capacitor smoothing)	Not equipped	3.4
		Equipped (on AC side)	1.8
		Equipped (on DC side)	1.8
		Equipped (on AC and DC sides)	1.4
4	Single-phase bridge (capacitor smoothing)	Not equipped	2.9
		Equipped (on AC side)	1.3

For information on how to calculate the harmonic current, use the following as a reference.

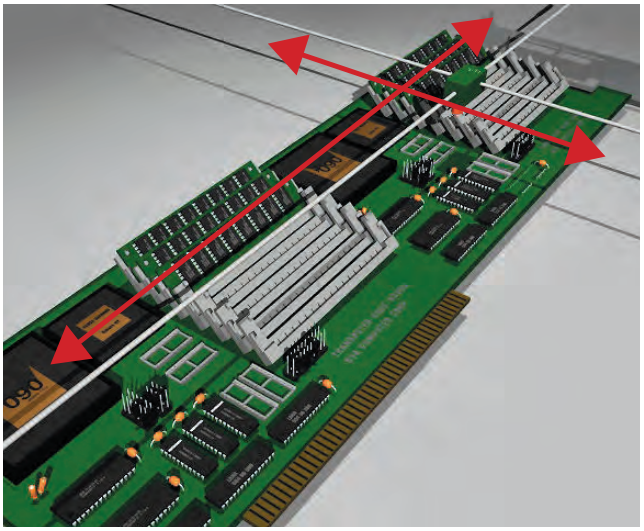
Fuji offers optimum solutions according to customer needs

01 Prober

Inspecting instrument used in semi-conductor manufacturing equipment



Solution 1 To improve productivity

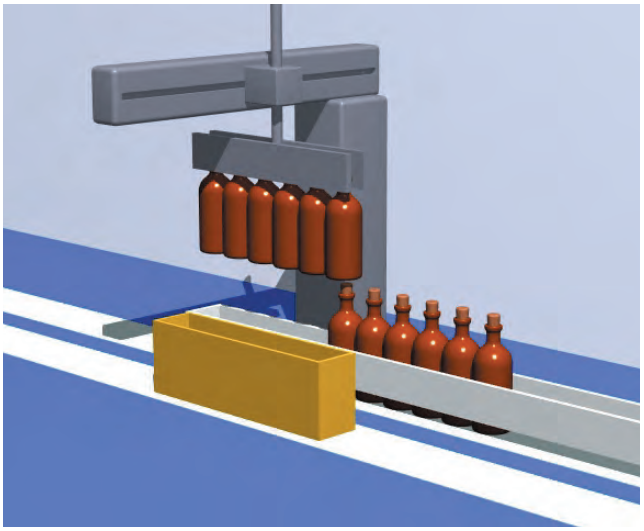
Fine tuning and feed forward gain

Solution 2 To reduce the vibrations of the machine

Auto damping control and anti-resonant frequency for damping

02 Takeout robot

Used to take out formed products and convey workpieces



Solution 1 To reduce the vibrations of the machine

Auto damping control and anti-resonant frequency for damping

Solution 2 To suppress the resonance of the machine

Tuningless and notch filter features

Solution 3 To prevent objects from being caught in the machine

Interference detection feature

03 Vertical wrapping machine

Used to fill or wrap food or chemical

Solution 1 To eliminate defective workpieces by synchronizing the feed, seal, and cut axes

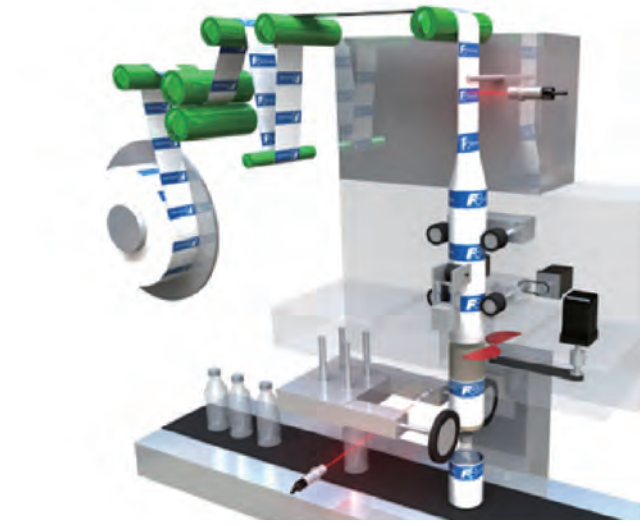
Interpolation operation mode and feed forward control

Solution 2 To cut the material at the position of the reference mark

Enable interrupt input

04 Label wrapping machine

Used to wrap labels around bottles



Solution 1 To improve productivity

Fine tuning and feed forward gain

Solution 2 To establish a safe system

Apply safety functions

Solution 3 To cut the material at the position of the reference mark

Enable interrupt input

Model Codes: You can determine the model code of a product by filling in digits according to sequence numbers.

		Torque control	Closed-loop control (proportional open-loop control for current and torque), torque limiting, speed limiting during torque control, etc. by using a current regulator										
		Ancillary features	Easy tuning, pattern run, sequence test mode, auto tuning, auto notch filter, vibration suppression control online learning, etc.										
Protective features (Alarm display)		VS/LS/VV type	Over Current (OC1, OC2), Over Speed (OS), Low Control Voltage (LvC), Overvoltage (Hv), Encoder Trouble (Et1, Et2), Memory Error (dE), Motor Combination Error (CE), Encoder Communication Error (EC), CONT (Control signal) Error (CtE), Over Load (OL1, OL2, OL3), Power Low Voltage (LvP), Regenerative Resistor Overheat (rH1, rH2), Regenerative Transistor Error (rH3), Inrush Current Suppressing Circuit Error (rH4), Deviation Overflow (oF), Amplifier Overheat (AH), Encoder Overheat (EH), Absolute Data Lost (dL1, dL2, dL3), Multi-turn Data Over Flow (AF), Initial Error (IE), Command Pulse Frequency Error (HF),Functional Safety Error (EcF)										
		VC type	Overvoltage (OC01, OC02), Over Speed (OS), Low Control Voltage (LvCn), Overvoltage (Hv), Encoder Trouble (Et01, Et02), Memory Error (dE), Motor Combination Error (CE), Encoder Communication Error (EC), CONT (Control signal) Error, Over Load (OL01, OL02, OL03), Power Low Voltage (LvPo), Regenerative Resistor Overheat (rH01, rH02), Regenerative Transistor Error (rH03), Inrush Current Suppressing Circuit Error (rH04), Deviation Overflow (oF), Amplifier Overheat (AH), Encoder Overheat (EH), Absolute Data Lost (dL01, dL02, dL03), Multi-turn Data Over Flow (AF), Initial Error (IE),Command Pulse Frequency Error (HF), Functional Safety Error (SFty), EtherCAT Communication Error (CY) * If the message is four-digit, two digits of the message alternately appear at a time on the 7-segment LED.										
Operation and display section of main body		VS/LS/VV type	5-digit alphanumeric display with 7-segment LED 4 operation switches (MODE, UP, DOWN, and SET)										
		VC type	2-digit alphanumeric display with 7-segment LED Rotary switch										
Working conditions		Installation place	Indoors at altitude ≤ 1000m, free from dust, corrosive gases and direct sunlight In case of compliance with UL/CE marking: Pollution Degree=2 Over Voltage Category=III										
		Temperature/humidity/ atmospheric pressure	-10 to 55°C/10 to 90%RH (without condensation)/70 to 106kPa										
		Vibration/shock resistance	Vibration resistance: 3mm: < 2 to 9Hz 9.8m/s^2: < 9 to 20Hz 2m/s^2: < 20 to 55Hz 1m/s^2: < 55 to 200Hz Shock resistance: 19.6m/s^2 (2G)										
Standards			UL standard: UL61800-5-1 CE marking Low voltage directive: EN61800-5-1 EMC directive: EN61800-3 Machinery directive: EN ISO13849-1 EN60204-1 EN61508 SIL3 EN61800-5-2 SIL3 (STO) EN62061 SIL CL3										
Control function		Frequency response	3,200Hz										
		Tuning features	Auto tuning, semi-auto tuning, interpolation control mode, manual tuning										
		Auto adjustment features	Tuningless features, easy tuning, fine tuning										
		Notch filter	5-step										
		Damping control	2-step (number of steps that can be configured at the same time)										
		Compensation features	Friction compensation, interference detection, cogging torque compensation										

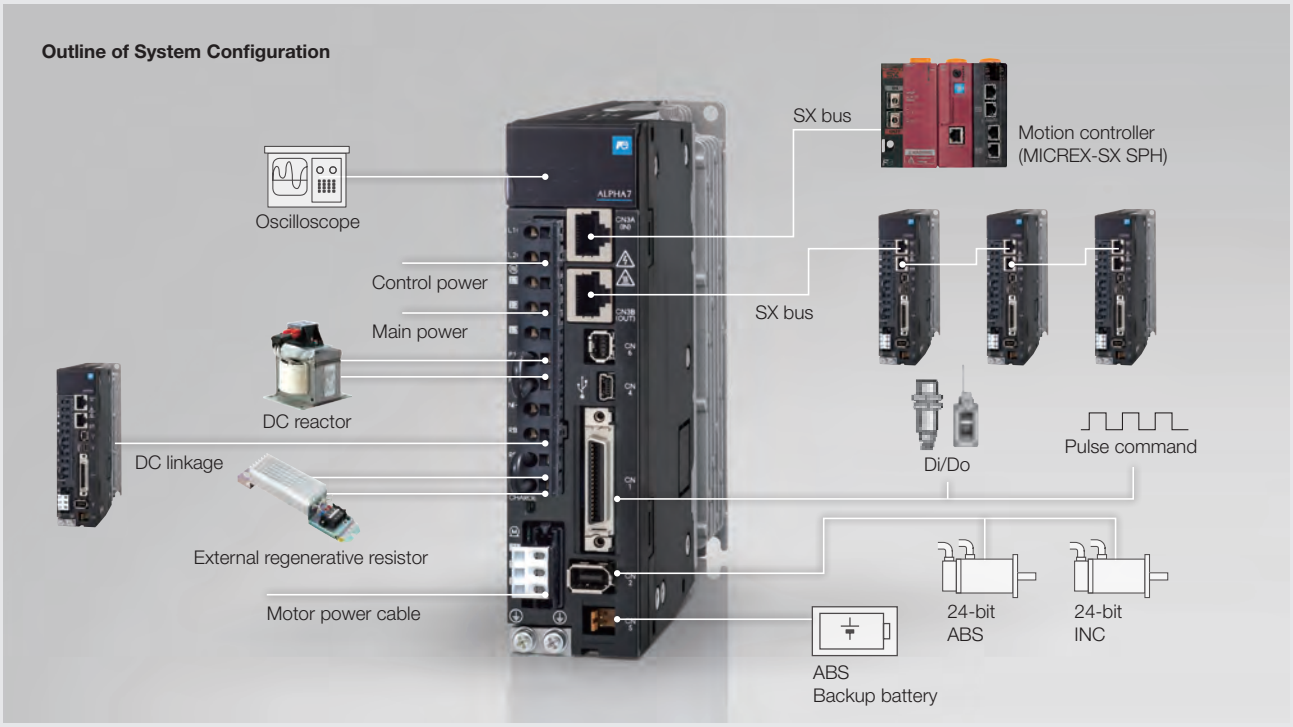
*1: This value assumes that the external resistor dedicated to each amplifier is connected.

*2: We will accept custom orders for models without a dynamic brake.

*3: This value represents the average value of the speed fluctuation that is generated from static load fluctuation, power supply fluctuation, and temperature fluctuation as the percentage to the rated rotation speed.

Specifications: VS and LS Type Servo Amplifiers

Outline of System Configuration



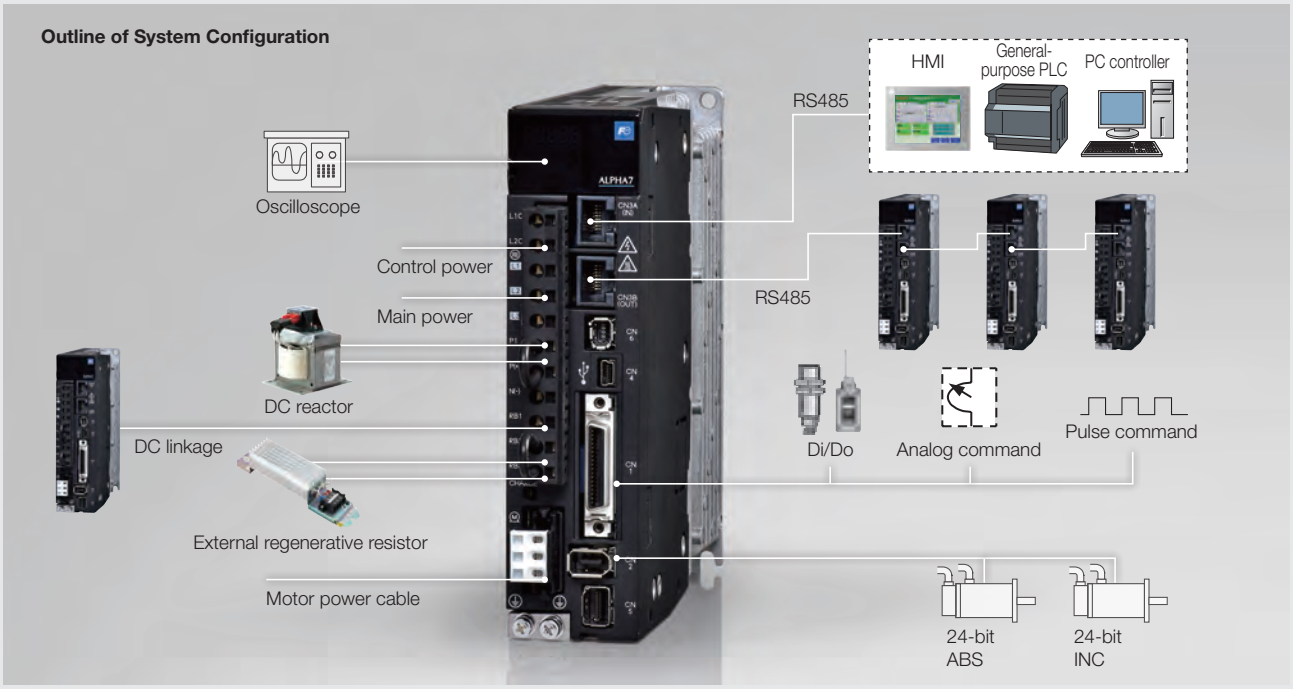
Interface specifications

Interface type		Specifications
Command interface	Position control	SX bus: IQ area
	Speed control	
	Torque control	
Communication interface		SX bus (for command interface, parameter editing, and monitoring)
		Our original protocol
		25Mbps, connection of max. 32 axes

Terminal name	Symbol	Specifications
Pulse input VS: For pulse counter LS: For position control	CA, *CA CB, *CB	Differential input: Max. input frequency ≤ 4.0MHz Open collector input: Max. input frequency ≤ 200kHz (In case of signals at 90-degree phase difference, the above relationship is true for the four-fold frequency.) Pulse format { Command pulse/Command direction; Forward/Reverse pulse; Two signals at 90-degree phase difference } Select one of these formats with a parameter setting
	PPI	Pull-up power input at open collector input (24VDC ± 10%)
Pulse output	FFA, *FFA FFB, *FFB	Differential output: Max. output frequency ≤ 500kHz Two signals at 90-degree phase difference Pulse output count setting (n pulses/rev): 16 ≤ n ≤ 4194304
	FFZ, *FFZ	Differential output: 1 pulse/rev
	FZ	Open collector output: 1 pulse/rev
	M5	Reference potential (0V)
Analog monitor voltage output	MON1 MON2	0V to ±10VDC Resolution: 14 bits / ± full scale The output data depends on the internal parameter
	M5	Reference potential (0V)
Common for sequence I/O	COMIN	Common for sequence input signal
	COMOUT	Common for sequence output signal
Sequence input signal	CONT1 to CONT5	ON upon short circuit across contacts, OFF upon open circuit 12VDC-10% to 24VDC+10% Current consumption 8mA (per contact; used at circuit voltage 24VDC) Function of each signal depends on parameter setting Compatible with both sink and source input methods
Sequence output signal	OUT1 to OUT2	Short circuit upon ON, open circuit upon OFF 30VDC / 50mA (max.) Function of each signal depends on parameter setting Compatible with both sink and source output methods

Specifications: VV Type Servo Amplifier

Outline of System Configuration



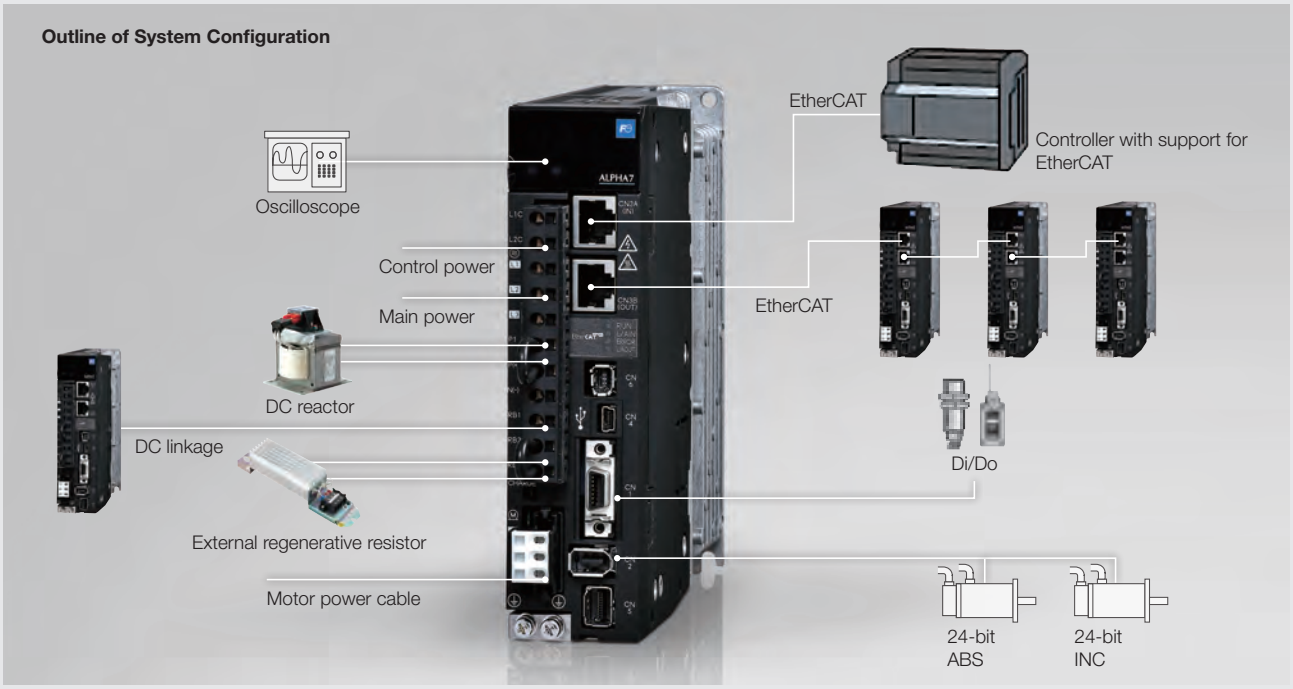
Interface specifications

Interface type		Specifications
Command interface	Positioning feature	RS-485 (Modbus-RTU), Di/Do
	Position control	Pulse command
	Speed control	Analog voltage input
	Torque control	Analog voltage input
Communication interface		Dual RS-485 ports (for parameter editing and monitoring)
		Our original protocol, Modbus-RTU
		9600/19200/38400/115200 bps, connection of max. 31 axes

Terminal name	Symbol	Specifications
Pulse input Also used for CONT signal	CA, *CA CB, *CB	Differential input: Max. input frequency ≤ 4.0MHz Open collector input: Max. input frequency ≤ 200kHz (In case of signals at 90-degree phase difference, the above relationship is true for the four-fold frequency.) Pulse format { Command pulse/Command direction; Forward/Reverse pulse; Two signals at 90-degree phase difference } Select with parameters from here.
		CA,*CA: CONT CA signal, CB,*CB: CONT CB signal, compatible with both sink input and source input
	PPI	Pull-up power input at open collector input (24VDC ± 10%)
Pulse output Also used for OUT signal	FFA, *FFA FFB, *FFB	Differential output: Max. output frequency ≤ 1.0MHz Two signals at 90-degree phase difference Pulse output count setting (n pulses/rev): 16 ≤ n ≤ 4194304
	FFZ, *FFZ	Differential output: 1 pulse/rev
	FZ	Open collector output 1pulse/rev, FZ: OUT FZ signal
	M5	Reference potential (0V)
Analog monitor voltage output	MON1 MON2	0V to ±10VDC Resolution: 14 bits / ± full scale The output data depends on the internal parameter
	M5	Reference potential (0V)
Common for sequence I/O	COMIN	Common for sequence input signal
	COMOUT	Common for sequence output signal
Sequence input signal	CONT1 to CONT8	ON upon short circuit across contacts, OFF upon open circuit 12VDC-10% to 24VDC+10% Current consumption 8mA (per contact; used at circuit voltage 24VDC) Function of each signal depends on parameter setting Compatible with both sink and source input methods
Sequence output signal	OUT1 to OUT5	Short circuit upon ON, open circuit upon OFF 30VDC / 50mA (max.) Function of each signal depends on parameter setting Compatible with both sink and source output methods
Analog voltage input	VREF	Speed command entry when performing speed control Valid range: -10V to 0 to +10V, input impedance: 20 kΩ Resolution: 16 bits / ± full scale
	TREF	Torque command entry when performing torque control Valid range: -10V to 0 to +10V, input impedance: 20 kΩ Resolution: 16 bits / ± full scale
	P10	Analog command power output (+10VDC), output capacity 30mA
	M5	Reference potential (0V)

Specifications: VC Type Servo Amplifier

Outline of System Configuration



Interface specifications

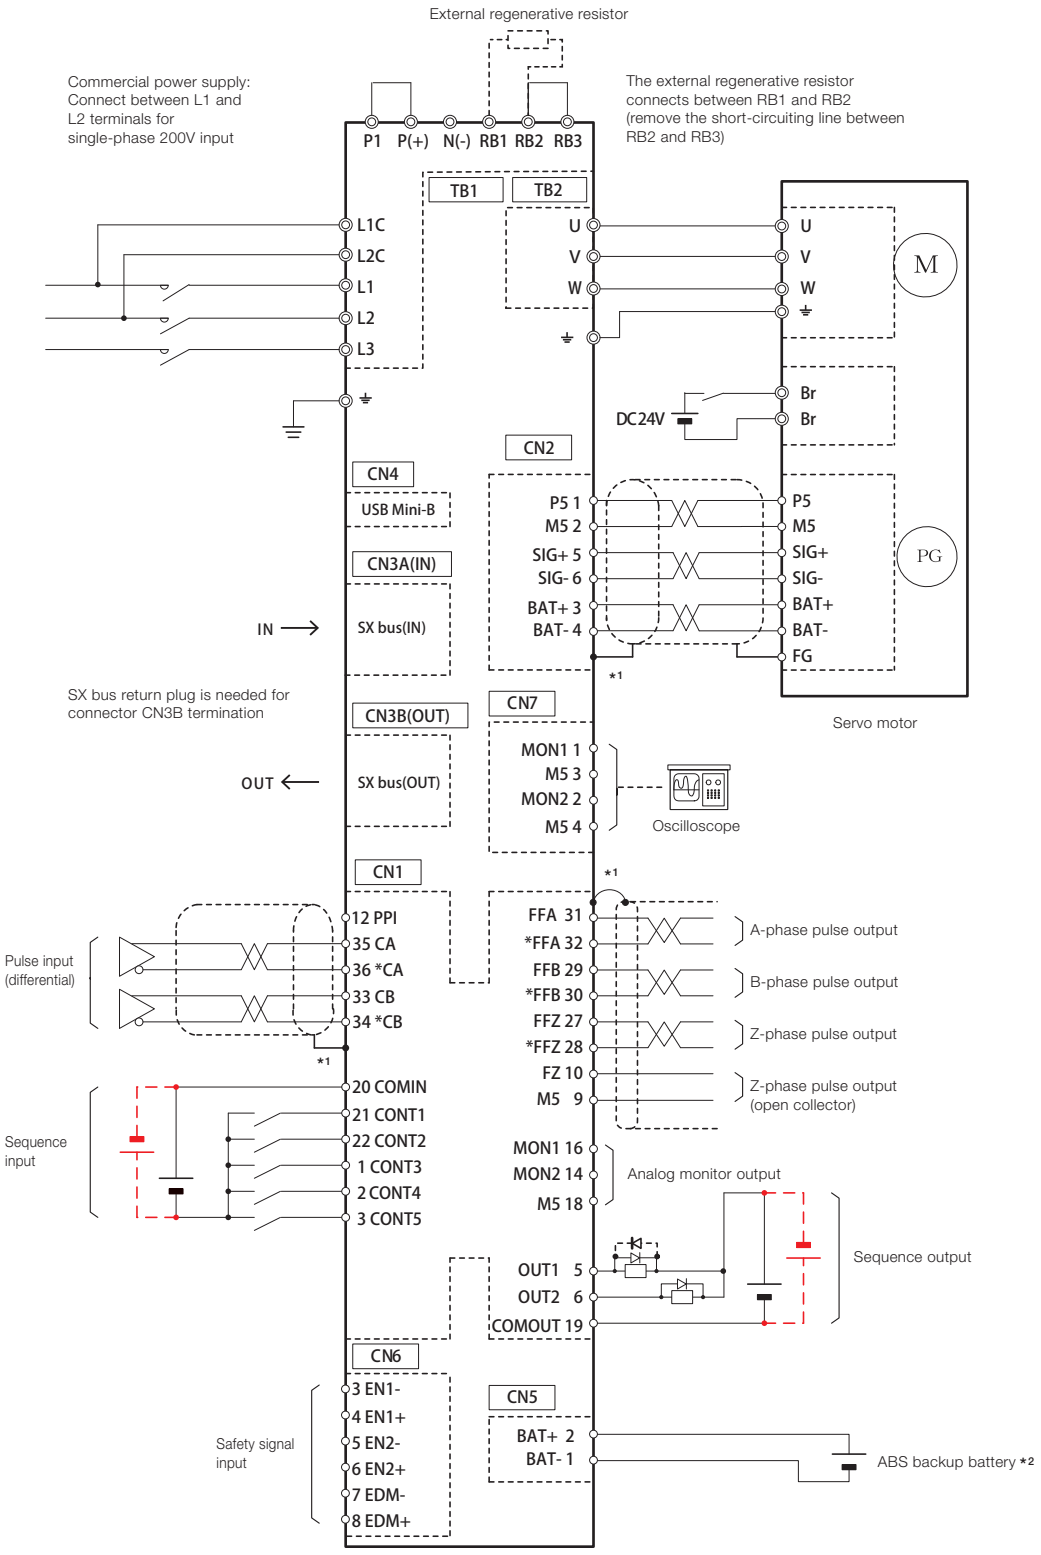
Interface type		Specifications
Command interface	Position control	EtherCAT CiA402 drive profile
	Speed control	
	Torque control	
Communication interface		EtherCAT (for command interface, parameter editing, and monitoring)
		Can application over EtherCAT
		100Mbps

EtherCAT communication specifications

Item		Specifications
Physical layer		100Base-TX[IEEE802.3]
Baud rate		100Mbps(Full duplex)
Topology		Line
Communication cable		Twist pair cable CAT5e
Communication distance		Node-to-node distance: Max. 100 m
Number of slaves		65535 * The number of slaves that can be controlled with PDO is limited depending on the communication cycle and data length.
Communication port		2 ports (RJ45 connectors)
Station alias		Setting range: 0-65535
Device profile		CAN application over EtherCAT
Cia402 drive profile		pp: Profile position mode
		pv: Profile velocity mode
		hm: Homing mode
		csp: Cyclic synchronous position mode
		csv: Cyclic synchronous velocity mode
		cst: Cyclic synchronous torque mode
Touch probe		Supported (two inputs)
Synchronization method	Synchronous mode	DC: Distribute clock
		SM2: Cyclic PDO communication
	Asynchronous mode	Free RUN
Communication cycle		125[µs], 250[µs], 500[µs], 1000[µs], 2000[µs], 4000[µs]
Communication form		SDO, PDO
SDO message		Normal Request, Normal Response
Free PDO Mapping		Supported *Only the objects defined to be supportable in our specifications
Maximum PDO data count		4x16 [Entry/PDO] (RxPDO) + 4x16 [Entry/PDO] (TxPDO)
Maximum PDO data length		128 [bytes] (Rx PDO) + 128 [bytes] (Tx PDO)

Terminal name	Symbol	Specifications
Analog monitor voltage output	MON1 MON2	0V to ±10VDC Resolution: 14 bits / ± full scale The output data depends on the internal parameter
	M5	Reference potential (0V)
Common for sequence I/O	COMIN	Common for sequence input signal
	COMOUT	Common for sequence output signal
Sequence input signal	CONT1 to CONT6	ON upon short circuit across contacts, OFF upon open circuit 12VDC-10% to 24VDC+10% Current consumption 8mA (per contact; used at circuit voltage 24VDC) Function of each signal depends on parameter setting Compatible with both sink and source input methods
Sequence output signal	OUT1 to OUT2	Short circuit upon ON, open circuit upon OFF 30VDC / 50mA (max.) Function of each signal depends on parameter setting Compatible with both sink and source output methods

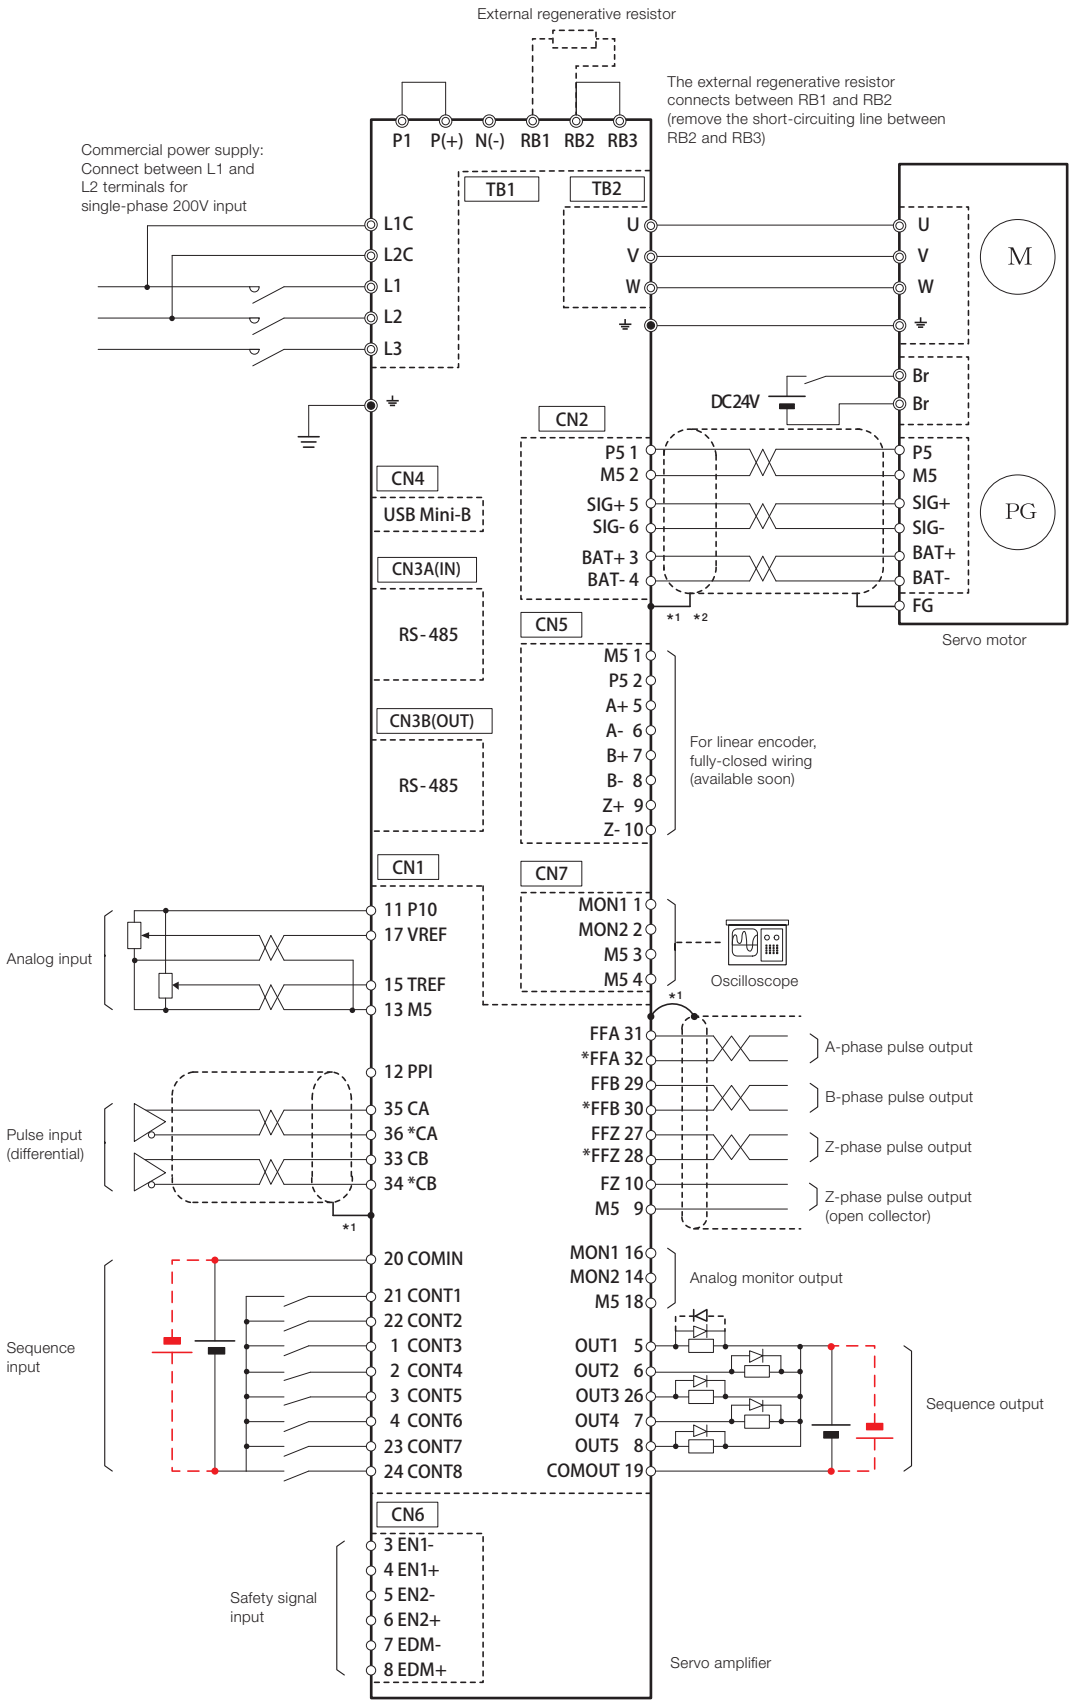
Connection diagram for reference: VS and LS type Servo Amplifiers (Frame 1)



*1: The shielded wire on the servo amplifier side connects to the connector shell.
*2: When using the encoder cable with the battery, remove the battery for ABS backup of CN5.

The diagram shown above is intended as a reference for model selection.
When actually using the selected servo system, make wiring connections according to the connection diagram and instructions described in the user's manual.

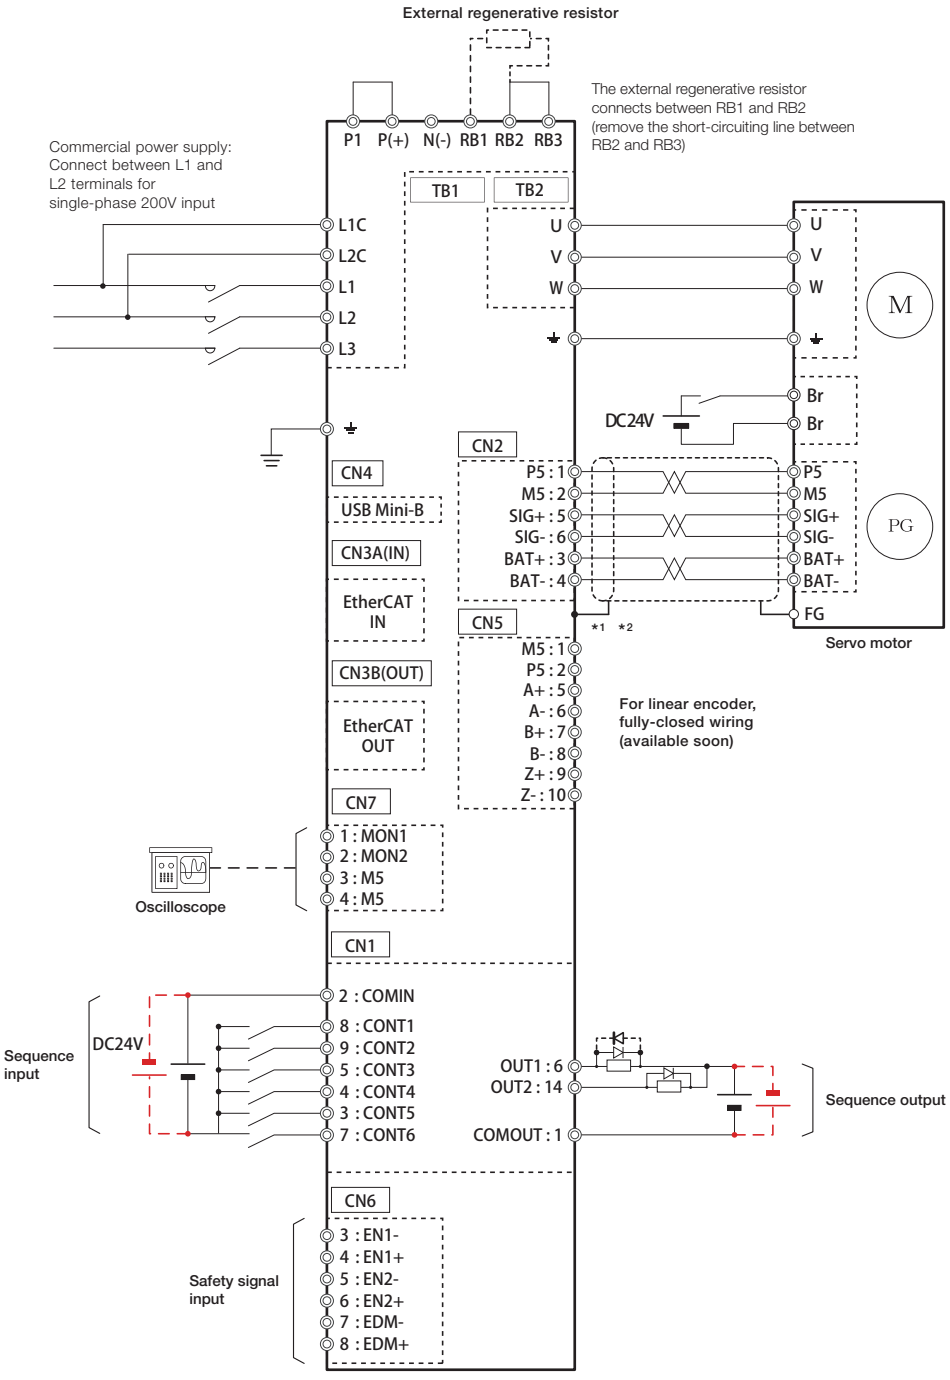
Connection diagram for reference: VV Type Servo Amplifier (Frame 1)



*1: The shielded wire on the servo amplifier side connects to the connector shell.
*2: To connect an ABS encoder, use an encoder cable with a battery.

The diagram shown above is intended as a reference for model selection.
When actually using the selected servo system, make wiring connections according to the connection diagram and instructions described in the user's manual.

Connection diagram for reference: VC Type Servo Amplifier (Frame 1)



*1: The shielded wire on the servo amplifier side connects to the connector shell.
*2: To connect an ABS encoder, use an encoder cable with a battery.

The diagram shown above is intended as a reference for model selection.
When actually using the selected servo system, make wiring connections according to the connection diagram and instructions described in the user's manual.

Servomotor specifications: GYS motor

Standard specifications

Motor type	GYS500D7 -□□2	GYS101D7 -□□2	GYS201D7 -□□2	GYS401D7 -□□2	GYS751D7 -□□2
Rated output [kW]	0.05	0.1	0.2	0.4	0.75
Rated torque [N·m]	0.159	0.318	0.637	1.27	2.39
Rated speed [r/min]	3000				
Max. speed [r/min]	6000				
Max. torque [N·m]	0.478	0.955	1.91	3.82	7.17
Inertia [kg·m^2]	0.0192×10^{-4}	0.0371×10^{-4}	0.135×10^{-4}	0.246×10^{-4}	0.853×10^{-4}
Rated current [A]	0.85	0.85	1.5	2.7	4.8
Max. current [A]	2.55	2.55	4.5	8.1	14.4
Winding insulation class	Class B				
Degree of enclosure protection	Totally enclosed, self-cooled (IP 67, excluding the shaft sealing and connectors)*1				
Terminals (motor)	Cable 0.3m (with connector)				
Terminals (encoder)	Cable 0.3m (with connector)				
Overheat protection	Not provided (The servo amplifier detects temperature.)				
Mounting method	By securing motor flange IMB5 (L51), IMV1 (L52), IMV3 (L53)				
Encoder	24-bit serial encoder (absolute/incremental)				
Vibration level*2	V5 or below				
Installation place, environment	For indoor use (free from direct sunlight), locations without corrosive and flammable gases, oil mist and dust				
Altitude	Altitude ≤ 1000m				
Ambient temperature, humidity	-10 to +40°C (without freezing), within 90% RH max. (without condensation)				
Vibration resistance [m/s^2]	49				
Mass [kg]	0.45	0.55	1.2	1.8	3.4
Standards	UL/cUL (UL1004), CE marking (EN60034-1, EN60034-6), RoHS directive				

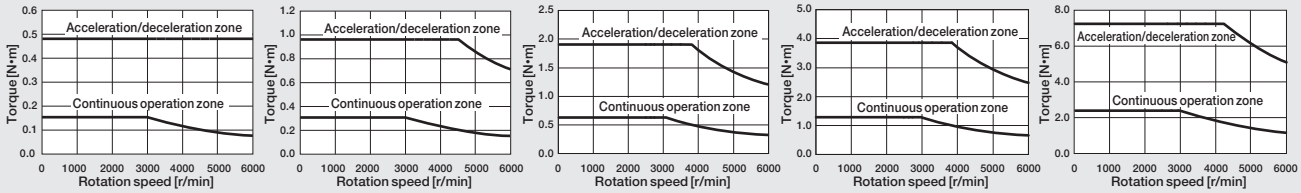
*1: When using the product under such an environment as specified in IP67, make sure that the connector for wiring is compatible with IP67.
*2: The vibration value is the property of flange type IMV1 (L52).

Brake specifications (motor equipped with a brake)

Motor type	GYS500D7 -□□2-B	GYS101D7 -□□2-B	GYS201D7 -□□2-B	GYS401D7 -□□2-B	GYS751D7 -□□2-B
Rated output [kW]	0.05	0.1	0.2	0.4	0.75
Rated torque [N·m]	0.159	0.318	0.637	1.27	2.39
Inertia [kg·m^2]	0.0223×10^{-4}	0.0402×10^{-4}	0.159×10^{-4}	0.270×10^{-4}	0.949×10^{-4}
Static friction torque [N·m]	0.34		1.27		2.45
Rated DC voltage [V]	24VDC ± 10%				
Attraction time [ms]	35		40		60
Release time [ms]	10		20		25
Power consumption [W]	6.1 (at 20°C)		7.3 (at 20°C)		8.5 (at 20°C)
Mass [kg]	0.62	0.72	1.7	2.3	4.2

Torque characteristics diagrams (at 3-phase 200V or single-phase 230V source voltage)

GYS500D7-□□2	GYS101D7-□□2	GYS201D7-□□2	GYS401D7-□□2	GYS751D7-□□2
0.05kW	0.1kW	0.2kW	0.4kW	0.75kW



These characteristics indicate typical values of each servomotor combined with the corresponding RYT-7 type servo amplifier.
The rated torque indicates the value obtained when the servo amplifier is installed to the following aluminum heat sink.
- Model GYS500D, 101D: 200 x 200 x 6 [mm]
- Model GYS201D, 401D: 250 x 250 x 6 [mm]
- Model GYS751: 300 x 300 x 6 [mm]

The rated torque indicates the value obtained when the servo amplifier is installed to the following aluminum heat sink.
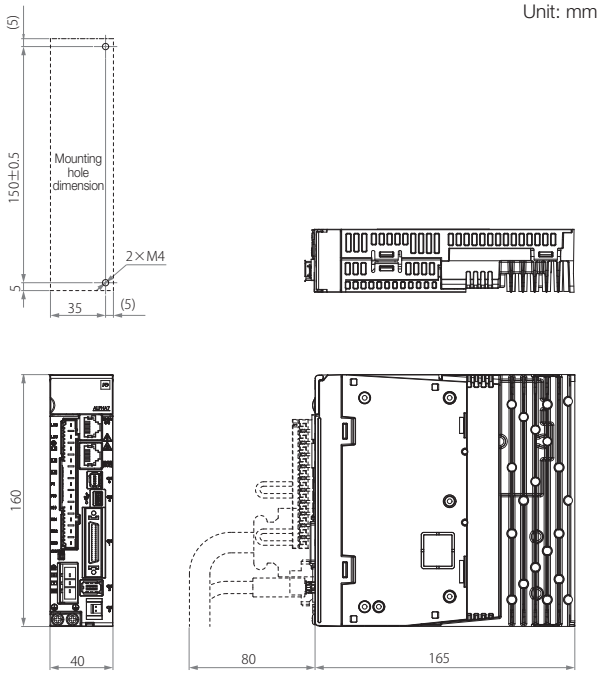
- Model GYG102C/Model GYG851B: 300 × 300 × 12 [mm]
- Model GYG152C/Model GYG132B: 400 × 400 × 12 [mm]

External Dimensions: Servo Amplifier

VS/LS Types

Frame 1

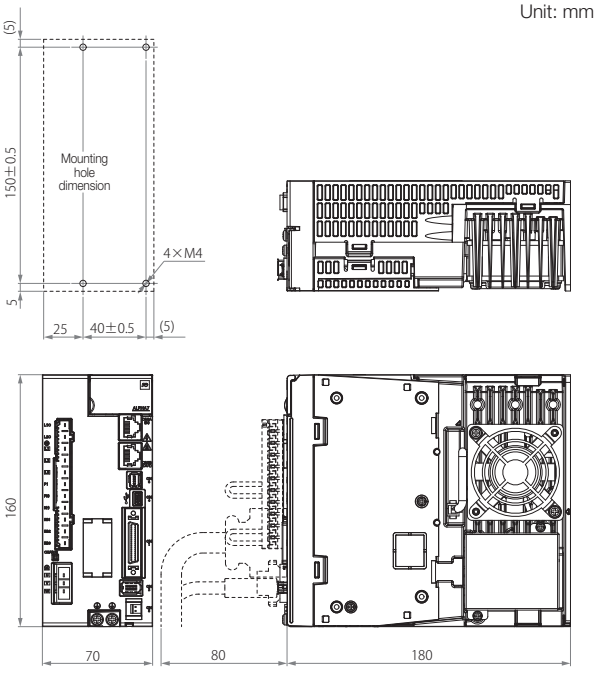
Unit: mm



Power supply	Capacity	Type	Mass [kg]
200V series	0.05kW	RYT500F7-□S2	0.9
	0.1kW	RYT101F7-□S2	
	0.2kW	RYT201F7-□S2	
	0.4kW	RYT401F7-□S2	

Frame 2

Unit: mm



Power supply	Capacity	Type	Mass [kg]
200V series	0.75kW	RYT751F7-□S2	1.5

Model List: Options

Category	Name			Applicable	Specifications	Type
Options	For sequence I/O (between host and amplifier)	Sequence I/O cable		For VS, LS, and VV servo amplifiers	3m (bare wires on one side)	WSC-D36P03
		Sequence I/O connector*1		For VS, LS, and VV servo amplifiers	1 set	WSK-D36P
	For safety equipment	Safety equipment cable		Amplifier side: all capacities	1m (bare wires on one side)	WSC-D08P01
	For motor power (between amplifier and motor)	Motor power cable	For main motor power	GYS: 0.05 to 0.75kW GYB: 0.2 to 0.75kW (Lead wire type)	2m (bare wires on one side)	WSC-M04P02-E
					5m (bare wires on one side)	WSC-M04P05-E
					10m (bare wires on one side)	WSC-M04P10-E
					20m (bare wires on one side)	WSC-M04P20-E
				GYB: 0.2 to 0.75kW (Connector type)	2m (bare wires on one side)	WSC-M04P02-K
					5m (bare wires on one side)	WSC-M04P05-K
					10m (bare wires on one side)	WSC-M04P10-K
					20m (bare wires on one side)	WSC-M04P20-K
			For brake power	GYS: 0.05 to 0.75kW GYB: 0.2 to 0.75kW (Lead wire type)	2m (bare wires on one side)	WSC-M02P02-E
					5m (bare wires on one side)	WSC-M02P05-E
					10m (bare wires on one side)	WSC-M02P10-E
					20m (bare wires on one side)	WSC-M02P20-E
				GYB: 0.2 to 0.75kW (Connector type)	2m (bare wires on one side)	WSC-M02P02-K
					5m (bare wires on one side)	WSC-M02P05-K
					10m (bare wires on one side)	WSC-M02P10-K
					20m (bare wires on one side)	WSC-M02P20-K
		Motor power connector*1	For main motor power	GYS/GYB: 0.05 to 0.75kW*2	1 set	WSK-M04P-E
				GYS: 1.0 to 2.0kW	1 set	WSK-M04P-CA
				GYS: 3.0 to 5.0kW	1 set	WSK-M04P-CB
				GYG: 0.85 to 1.5kW	1 set	WSK-M04P-CC
			For brake power	GYS/GYB: 0.05 to 0.75kW*2	1 set	WSK-M02P-E
			For brake power	GYS: 1.0 to 2.0kW	1 set	WSK-M06P-CA
				GYS: 3.0 to 5.0kW	1 set	WSK-M06P-CB
				GYG: 0.85 to 1.5kW	1 set	WSK-M06P-CC
	For encoder (between amplifier and motor)	Encoder cable		GYS: 0.05 to 0.75kW GYB: 0.2 to 0.75kW (Lead wire type)	2m	WSC-P06P02-E
					5m	WSC-P06P05-E
					10m	WSC-P06P10-E
					20m	WSC-P06P20-E
				GYB: 0.2 to 0.75kW (Connector type)	2m	WSC-P06P02-K
					5m	WSC-P06P05-K
					10m	WSC-P06P10-K
					20m	WSC-P06P20-K
				GYS: 1.0 to 5.0kW	5m	WSC-P06P05-C
					10m	WSC-P06P10-C
					20m	WSC-P06P20-C
				GYG: 0.85 to 1.5kW	5m	WSC-P06P05-J
					10m	WSC-P06P10-J
					20m	WSC-P06P20-J
		Encoder connector*1		Amplifier side: all capacities	1 set	WSK-P06P-M
				GYS/GYB: 0.05 to 0.75kW*2	1 set	WSK-P09P-D
				GYS: 1.0 to 5.0kW	1 set	WSK-P06P-C
				GYG: 0.85 to 1.5kW	1 set	WSK-P10P-J
		Junction cable for encoder with battery		For VV and VC servo amplifiers	0.3m	WSC-P06P0R3-BG
		Encoder cable with a battery (1)		For VV and VC servo amplifiers GYS/GYB Lead wire connection specifications 0.75kW or less	2m	WSC-P06P02-BE
					5m	WSC-P06P05-BE
					10m	WSC-P06P10-BE
					20m	WSC-P06P20-BE
		Encoder cable with a battery (2)		For VV and VC servo amplifiers GYB Connector connection specification 0.75kW or less	2m	WSC-P06P02-BK
					5m	WSC-P06P05-BK
					10m	WSC-P06P10-BK
					20m	WSC-P06P20-BK
		Encoder cable with a battery (3)		For VV and VC servo amplifiers GYS 1.0 [kW] or more	2m	WSC-P06P02-BC
					5m	WSC-P06P05-BC
					10m	WSC-P06P10-BC
					20m	WSC-P06P20-BC
		Encoder cable with a battery (4)		For VV and VC servo amplifiers GYG	2m	WSC-P06P02-BJ
					5m	WSC-P06P05-BJ
					10m	WSC-P06P10-BJ
					20m	WSC-P06P20-BJ
		Battery case kit for encoder cable		For VV and VC servo amplifiers	1 set	WSB-BC
	For SX bus	SX bus cable		For VS and LS servo amplifiers	0.3m	NP1C-P3
					0.6m	NP1C-P6
					0.8m	NP1C-P8
					2m	NP1C-02
					5m	NP1C-05
					10m	NP1C-10
					15m	NP1C-15
					25m	NP1C-25
	ABS backup battery			Battery and mounting case set for VS servo amplifier * With mounting case	1 set	WSB-SC
				Battery * Replacement battery only	1 piece	WSB-S
	External regenerative resistor			GYS, GYB: 0.05 to 0.4kW	1 piece	WSR-401
				GYS, GYB: 0.75 to 1.5kW, GYG: 0.85, 1.0kW	1 piece	WSR-152
				GYS: 2.0 to 3.0kW GYG: 1.3kW, 1.5kW	1 piece	DB11-2
				GYS: 4.0 to 5.0kW	1 piece	DB22-2
	For PC loader connection	RS232C-RS-485 Conversion adapter		For connection of VV type servo amplifier's RS-485 port	-	NW0H-CNV
		Cable			2m	WSC-PCL

*1: This connector is intended for use when the customer fabricates a cable of an arbitrary length.
*2: This is not necessary for GYB motors, connector type.

Product Warranty

Please take the following items into consideration when placing your order.

When requesting an estimate and placing your orders for the products included in these materials, please be aware that any items such as specifications which are not specifically mentioned in the contract, catalog, specifications or other materials will be as mentioned below.
In addition, the products included in these materials are limited in the use they are put to and the place where they can be used, etc., and may require periodic inspection. Please confirm these points with your sales representative or directly with this company.
Furthermore, regarding purchased products and delivered products, we request that you take adequate consideration of the necessity of rapid receiving inspections and of product management and maintenance even before receiving your products.

1. Free of Charge Warranty Period and Warranty Range

1-1 Free of charge warranty period

(1) The product warranty period is ''1 year from the date of purchase'' or 24 months from the manufacturing date imprinted on the name place, whichever date is earlier.
(2) However, in cases where the use environment, conditions of use, use frequency and times used, etc., have an effect on product life, this warranty period may not apply.
(3) Furthermore, the warranty period for parts restored by Fuji Electric's Service Department is ''6 months from the date that repairs are completed.''

1-2 Warranty range

(1) In the event that breakdown occurs during the product's warranty period which is the responsibility of Fuji Electric, Fuji Electric will replace or repair the part of the product that has broken down free of charge at the place where the product was purchased or where it was delivered. However, if the following cases are applicable, the terms of this warranty may not apply.

1) The breakdown was caused by inappropriate conditions, environment, handling or use methods, etc. which are not specified in the catalog, operation manual, specifications or other relevant documents.
2) The breakdown was caused by the product other than the purchased or delivered Fuji's product.
3) The breakdown was caused by the product other than Fuji's product, such as the customer's equipment or software design, etc.
4) Concerning the Fuji's programmable products, the breakdown was caused by a program other than a program supplied by this company, or the results from using such a program.
5) The breakdown was caused by modifications or repairs affected by a party other than Fuji Electric.
6) The breakdown was caused by improper maintenance or replacement using consumables, etc. specified in the operation manual or catalog, etc.
7) The breakdown was caused by a chemical or technical problem that was not foreseen when making practical application of the product at the time it was purchased or delivered.
8) The product was not used in the manner the product was originally intended to be used.
9) The breakdown was caused by a reason which is not this company's responsibility, such as lightning or other disaster.

(2) Furthermore, the warranty specified herein shall be limited to the purchased or delivered product alone.
(3) The upper limit for the warranty range shall be as specified in item (1) above and any damages (damage to or loss of machinery or equipment, or lost profits from the same, etc.) consequent to or resulting from breakdown of the purchased or delivered product shall be excluded from coverage by this warranty.

1-3 Trouble diagnosis

As a rule, the customer is requested to carry out a preliminary trouble diagnosis. However, at the customer's request, this company or its service network can perform the trouble diagnosis on a chargeable basis. In this case, the customer is asked to assume the burden for charges levied in accordance with this company's fee schedule.

2. Exclusion of Liability for Loss of Opportunity, etc.

Regardless of whether a breakdown occurs during or after the free of charge warranty period, this company shall not be liable for any loss of opportunity, loss of profits, or damages arising from special circumstances, secondary damages, accident compensation to another company, or damages to products other than this company's products, whether foreseen or not by this company, which this company is not be responsible for causing.

3. Repair Period after Production Stop, Spare Parts Supply Period (Holding Period)

Concerning models (products) which have gone out of production, this company will perform repairs for a period of 7 years after production stop, counting from the month and year when the production stop occurs. In addition, we will continue to supply the spare parts required for repairs for a period of 7 years, counting from the month and year when the production stop occurs. However, if it is estimated that the life cycle of certain electronic and other parts is short and it will be difficult to procure or produce those parts, there may be cases where it is difficult to provide repairs or supply spare parts even within this 7-year period. For details, please confirm at our company's business office or our service office.

4. Transfer Rights

In the case of standard products which do not include settings or adjustments in an application program, the products shall be transported to and transferred to the customer and this company shall not be responsible for local adjustments or trial operation.

5. Service Contents

The cost of purchased and delivered products does not include the cost of dispatching engineers or service costs. Depending on the request, these can be discussed separately.

6. Applicable Scope of Service

Please inquiry the supplier or Fuji Electric China for details of above.

SAFETY PRECAUTIONS

1. This catalog is intended for use in selecting required servo systems. Before actually using these products, carefully read their instruction manuals and understand their correct usage.
2. Products described in this catalog are neither designed nor manufactured for combined use with a system or equipment that will affect human lives.
   If you are considering using these products for special purposes, such as atomic energy control, aerospace, medical application, or traffic control, please consult our sales office.
3. If you use our product with equipment that is expected to cause serious injury or damage to your property in case of failure, be sure to take appropriate safety measures for the equipment.
