5 Port Solenoid Valve Plug Lead Type

S0700 Series

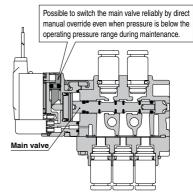

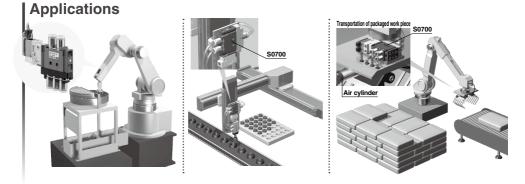

4-Position Dual 3-Port Valve

- Two 3-port valves in one body.
- Independently operating
 3-port valve at each
 side of A and B.
- Number of stations occupied for 3-port valve halved.
- Available as 4-position 5-port valve.

Note 1) Values for cylinder port fitting port size C4. The flow rate of a body ported single valve is the SUP and EXH port C4 value.

Note 2) Based on JIS B 8419-2010 (Supply pressure: 0.5 MPa, with indicator light and surge voltage suppressor, clean air. This will change depending on pressure and air quality.) The value when ON for the double type.

Note 3) If the product is used in the following conditions or environment, switching of the valve may be significantly delayed compared to the above values. 1. The first response time when the valve is not used for a long period of time

2. When using in an environment where the ambient and fluid temperature is low (10°C or less)

Note 4) The weight of a single unit of the valve includes a built-in EXH port silencer.

Note 5) The flow rate of the body ported product with an external pilot decreases by 10%.

Note 6) The flow rate of the body ported product with a built-in silencer decreases by 30%.

Specifications

	Valve construction	Rubber seal
		Rubber seal

S0700 Series **Options**

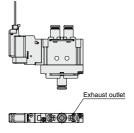

Direct EXH outlet with built-in silencer [S]

Since a silencer is built into the exhaust port of the valve, it has a high silencing effect. (Noise reduction: 20 dB(A))

- · How to Order Valves (Example)
- S0716 S -5G-C4

Built-in silencer

- Note) A large quantity of drainage generated in the air source results in exhaust of air together with drainage.
- . For maintenance, refer to page 762.

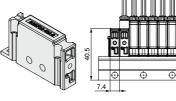

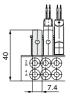

Body Bas Blanking plate assembly Mount Ported

SS0700-10A-2/SS0700-10A-5

It is used by attaching on the manifold block for being prepared for removing a valve for maintenance reasons or planning to mount a spare valve etc.

Applicable n	nanifold	Part no.	Weight
Body ported	SS0752	SS0700-10A-2	28 g
Base mounted	SS0755	SS0700-10A-5	21 g

Body Ported (SS0752)

Base Mounted (SS0755)

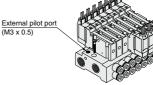

External pilot [-R]

This can be used when the air pressure is lower than the minimum operating pressure (0.2 MPa) of the solenoid valves or used for vacuum specification. Add "-R" to the part numbers of manifolds and valves to indicate the external pilot specification.

An M3 port will be installed on the top side of the manifold's SUP/EXH block.

- How to Order Valves (Example)
- S0712 R -5G-C4
 - External pilot
- How to Order Manifold (Example)
- * Indicate "-R" for an option.
 - SS0752-08C-R

External pilot

Note 1) The dual 3-port valve is not available Note 2) When the internal pilot type and external pilot type of valves are mixed up on the manifold, order the manifold suitable for the specification of the external pilot valve. Note 3) Valves with the external pilot have a pilot EXH with individual exhaust specification and EXH can be pressurized. However, the pressure supplied from EXH should be 0.4 MPa or lower.

Individual SUP spacer

SS0700-P-5-M5

Port size M5 M5 thread

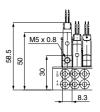

Mounted on the manifold block to make an independent supply port when each solenoid valve uses different operating pressure.

Weight: 7 g

* Compatible with 8.5 mm pitch manifold only.

* Cannot be mounted on the body ported manifold (SS0752).

ase Individual EXH spacer

SS0700-R-5-M5

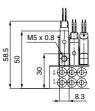

Port size
 M5 M5 thread

Mounted on the manifold block to make an independent exhaust port when the exhaust from one valve affects valves on other stations in the air circuit.

Weight: 7 g

- * Compatible with 8.5 mm pitch manifold only.
- * Cannot be mounted on the body ported manifold (SS0752).

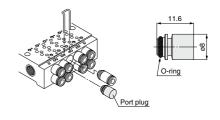

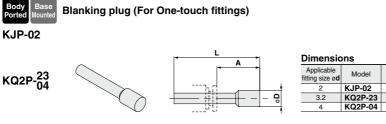

VVQ0000-CP

The plug is used to block the cylinder port when using a 5-port valve as a 3-port valve.

* When ordering a plug incorporated with a manifold, indicate "CM" for the port size in the manifold part number as well as the station number, mounting positions of cylinder port A/B, on the manifold specification sheet.

SUP side

SJ

SY

SY

(P1) S0700

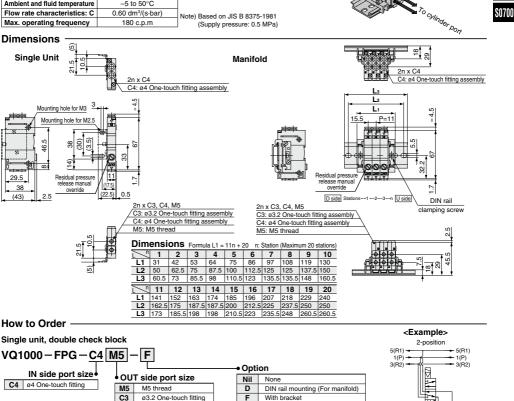

Double check block (Separated)

VQ1000-FPG-

It is used on the outlet side piping to keep the cylinder in the intermediate position for long periods of time. Combining the double check block with a built-in pilot type double check valve and a 2-position single/double solenoid valve will permit this block to be used for preventing the dropping at the cylinder stroke end when the SUP residual pressure is released.

Specifications

Max. operating pressure	0.8 MPa
Min. operating pressure	0.15 MPa
Ambient and fluid temperature	-5 to 50°C
Flow rate characteristics: C	0.60 dm ³ /(s·bar)
Max. operating frequency	180 c.p.m

Manifold (DIN rail mounting) VVQ1000-FPG-06

When ordering a double check block, order the DIN rail mounting [-D].

<Example>

Stations

01 1 station

16 16 stations

· Air leakage from the pipe between the valve and cylinder or from the fittings will prevent the cylinder from stopping for long periods of time. Check for the leakage using neutral household detergent, such as dish washing soap. Also, check the cylinder's tube gasket, piston seal and rod seal for air leakage.

Example) -DN

With name plate Note) When multiple symbols are specified, indicate them alphabetically.

Ν

- · Since One-touch fittings allow slight air leakage, screw piping (with M5 thread) is recommended when stopping the cylinder in the middle for long periods of time.
- . M5 fitting assembly is attached, not incorporated into the double check block. After screwing in the M5 fittings, mount the assembly on the double check block. {Tightening torque: 0.8 to 1.2 N·m}
- . If the exhaust of the double check block is restricted too much, the cylinder may not operate properly and may not stop intermediately.

PR plate

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 9 for 3/4/5 Port Solenoid Valve Precautions.

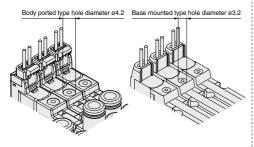

Manual Override

Warning

The manual override is used for switching the main valve.

Push type (Tool required)

Push down on the manual override button with a tool such as a small screwdriver until it stops.

How to Attach/Detach Plug Connector

To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever's pawl is pushed into the groove and locks.

To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

A Caution

Proper tightening torque [N·m]

Tighten the bolts firmly to stop the gasket from coming away from the valve using the appropriate torque as shown on the following table.

Note) In order not to damage the connector and cover, do not pull the lead wire excessively (with a force of 10 N or more).

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 9 for 3/4/5 Port Solenoid Valve Precautions.

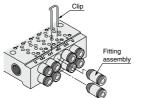

How to Replace One-touch Fittings

∧ Warning

The cylinder port fittings are a cassette for easy replacement.

Base Mounted

The fittings are blocked by a clip inserted from the top of the valve. Remove the clip with a tool such as a flat blade screwdriver to remove fittings. For replacement, insert the fitting assembly until it strikes against the inside wall and then re-insert the clip to the specified position.

	Applicable tube O.D.	Fitting assembly part no.
8.5 mm pitch (One-touch fitting)	Applicable tube ø2	VVQ0000-50A-C2
	Applicable tube ø3.2	VVQ0000-50A-C3
	Applicable tube ø4	VVQ0000-50A-C4
	Applicable tube ø1/8"	VVQ0000-50A-N1
	Applicable tube ø5/32"	VVQ0000-50A-N3
7.5 mm pitch (Barb fitting)	Barb fitting ø2	SS070-50A-20
	Barb fitting ø3.2	SS070-50A-32
	Barb fitting ø4	SS070-50A-40

* Part number is for one fitting assembly. Please order it in units of 10 pieces.

Body Ported

The fittings are blocked by a clip. After removing the corresponding valve and take out the clip with a tool such as watchmakers' flat blade screwdriver, then replace the fittings. For mounting, insert the fitting until it strikes against the inside wall and then insert the clip to the specified position.

* Part number is for one fitting assembly. Please order it in units of 10 pieces. @SMC

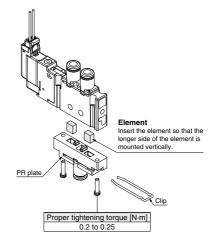

How to Replace Silencers

A single body ported valve has a built-in silencer. A dirty and clogged silencer may reduce cylinder speed or cause a malfunction. Replace the silencer periodically.

To replace the silencer, remove the PR plate after removing the clip, and then remove the old element with a tool such as a flat blade screwdriver

Element part number: S0700-82A-1

1 set includes 10 pieces. (for 5 valves)

Other Tube Brands

∧ Caution

When using other than SMC brand tube, confirm that the following specifications are satisfied with respect to the tube outside diameter tolerance.

1) Nylon tube	within ±0.1 mm
Soft nylon tube	within ±0.1 mm
3) Polyurethane tube	within +0.15 mm,
	within –0.2 mm

Do not use tube which do not meet these outside diameter tolerances. It may not be possible to connect them, or they may cause other trouble, such as air leakage or the tube pulling out after connection.

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 9 for 3/4/5 Port Solenoid Valve Precautions.

One-touch Fittings

Tube attachment/detachment for One-touch fittings

- 1) Tube attachment
 - Take a tube having no flaws on its periphery and cut it off at a right angle. When cutting the tube, use tube cutters TK-1, 2 or 3. Do not use pinchers, nippers or scissors, etc. If cutting is done with tools other than tube cutters, the tube may be cut diagonally or become flattened, etc., making a secure installation impossible. Allow some extra length in the tube.
 - 2. The outside diameter of the polyurethane tube swells when internal pressure is applied to it. Therefore, it may be possible that the tube cannot be re-inserted into the One-touch fitting. Check the tube outside diameter, and when the accuracy of the outside diameter is +0.07 mm or larger for ø2, +0.15 mm or larger for other sizes, insert into the One-touch fitting again, without cutting the tube to use it. When the tube is re-inserted into the One-touch fitting, confirm that the tube goes through the release button smoothly.
 - Grasp the tube, slowly push it straight (0 to 5°) into the Onetouch fitting until it comes to a stop.
 - 4. After inserting the tube, pull on it lightly to confirm that it will not come out. If it is not installed securely all the way into the fitting, this can cause problems such as air leakage or the tube pulling out.

2) Tube detachment

- 1. Push in the release button sufficiently, pushing its collar equally around the circumference.
- Pull out the tube while holding down the release button so that it does not come out. If the release button is not pressed down sufficiently, there will be increased bite on the tube and it will become more difficult to pull it out.
- 3. When the removed tube is to be used again, cut off the portion which has been chewed before reusing it. If the chewed portion of the tube is used as is, this can cause trouble such as air leakage or difficulty in removing the tube.

Do not apply unnecessary forces such as twisting, pulling, moment loads, vibration and impact, etc. on fittings or tubing.

A force of 20 N or more applied to the fitting and/or tube can cause damage to the valve and/or fitting, crushing, bursting, or detachment of tubing, or air leakage.

Internal Wiring Specifications

▲Caution

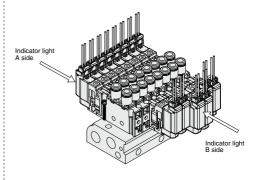

Light/surge voltage suppressor

No polarity by adopting non-polar light.

SJ
SY
SY
S0700
S0700

Note) Coil surge voltage generated when OFF is about –60 V. Please contact SMC separately for further suppression of the coil surge voltage.

Surge Voltage Intrusion

▲ Caution

The surge voltage created when the power supply is cut off could apply to the de-energized load equipment through the output circuit. In cases where the energized load equipment has a larger capacity (power consumption) and is connected to the same power supply as the product, the surge voltage could malfunction and/or damage the internal circuit element of the product and the internal device of the output equipment. To avoid this situation, place a diode which can suppress the surge voltage between the COM lines of the load equipment and output equipment.

∕∂SMC

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 9 for 3/4/5 Port Solenoid Valve Precautions.

How to Replace Pilot Valve

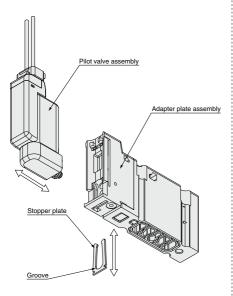

▲ Caution

Removal

- Remove the stopper plate from the adapter plate assembly by using a flat blade screwdriver on the concave of the stopper plate.
- 2) Take off the pilot valve in horizontal direction.

Mounting

- 1) Mount the pilot valve on the adapter plate assembly.
- Insert the stopper plate into the adapter plate so that the stopper plate will not protrude from the end of the adapter plate.

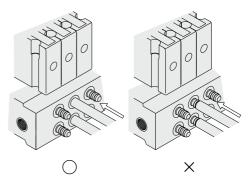

How to Connect Tubing

▲ Caution

<Base mounted/Barb fittings>

- 1) Perpendicularly cut the tube to the necessary length by using an SMC tube cutter TK-1, 2, 3 or 6.
- Firmly insert the tube into the barb fitting. Insufficient insertion of the tube could cause the air leakage and/or disconnection of the tube.
- 3) When inserting the tube into the barb fitting, move the tube in parallel to the axis of the barb fitting to avoid any excessive side load to the fitting.

- 4) Pay attention not to apply any excessive side load to the barb fitting when removing it from the tube. When using a tube cutter or something similar, be careful not to damage or crack the fitting.
- Do not apply any excessive load such as tensile, compressive or bending force to the tube once connected.
