### 3-Color Display Digital Gap Checker ISA3 Series

### 3-Step Setting (Switch Point Change Mode)

### Features of the 2-Screen, 3-Color Digital Display

#### The seating condition can be checked at a glance. The sub screen can display 1 of 6 display options.

**SMC** 

### **Improved Environmental Resistance**

#### **Easier maintenance**

### 3-Color Display Digital Gap Checker ISA3 Series

Noise reduction

Measures against clogging

Exhaust noise:

Noise reduction

Energy

saving

The current model (ISA2) needs to exhaust air from the exhaust port due to its bridge circuit. However, the ISA3 does not exhaust air from the product body.

This reduces noise considerably compared with the current model.

# B Air consumption: Energy saving 60% reduction\*1

The new detection principle eliminates the need for air to be exhausted from the product. This makes the flow consumption 0 L/min when a workpiece is seated.

The result is a great reduction in air consumption compared with the current model.

\*1 Conditions: Unseated for 5 seconds and seated for 20 seconds (For the G type)

By reducing the number of internal orifices from 3 to 1, there is less possibility of fluctuations in the output due to clogging.

By removing the setting dial for S3, fluctuations in the detection distance can be prevented.

A larger orifice area lowers the possibility of clogging.

However, even if the orifice does become clogged with foreign matter, the product construction allows for the internal orifice to be removed for cleaning.

\*1 Excludes the F type

### 2 Outputs Type

#### 1. Outlet pressure, 2. Gap size, or 3. Supply pressure can be selected for OUT2.

### **1. Monitoring of the Outlet Pressure**

OUT2 detection of rising pressure when a workpiece is not placed that signifies detection nozzle clogging.

Only nozzle clogging can be detected by the window comparator mode and setting the response time.

### 2. Monitoring of the Gap Size

Can discern between 2 different types of workpiece Can detect the difference between raw material workpieces and defective workpieces via the gap size

Can discern between 2 different types of workpiece

defective workpieces via the pressure (OUT2)

Can detect raw material workpieces and

ON OUT1 ON OFF ON ON OUT2 OFF Placed Displacement of outlet pressure Placed OUT2 set range Not placed Workpiece 1 Workpiece 2 (Raw material) After machining

### 3. Monitoring of the Supply Pressure

#### Detection of rated pressure range via OUT2

### **3-Color Display Digital Gap Checker** ISA3 Series

### Space Saving & Reduced Wiring Labor (Centralized Lead Wire

### 3-Color Display Digital Gap Checker ISA3 Series

### **Keylock Function**

A key LED turns ON when the product is locked and button operation is disabled to prevent unintentional changes to set values.

### **Piping Variations**

G1/8 \*1 Detection side \*1 Compliant with ISO 1179-1

### Mounting

### Manifold

\* The electrical entry of the centralized lead wire for the M12 connector is on the right side. When using a right-sided supply port, arrange the centralized lead wire so that it does not interfere with the control unit.

### **Application Examples**

# Confirmation of close contact with the reference plane for machining

## Confirmation of close contact with the workpiece for machining

### **Main Functions**

#### Display OFF mode

Display OFF mode can be selected. The display can be turned OFF to reduce power consumption.

#### **Display color**

The color of the main display can be set to change depending upon the output activity. The display color change makes visual identification of the output ON/OFF easier.

#### The numerical value disappears and only the decimal points blink.

/	When ON: Green	When OFF: Orange
1	When ON: Orange	When OFF: Green
;	Normally: Orange	
t	Normally: Green	

#### **Unit conversion**

The pressure unit displayed on the sub screen can be changed.

Display unit	kPa	bar	psi
Minimum setting resolution	1	0.01	0.1

#### Security code

When the security code is activated, the code needs to be entered before the product can be operated.

Security code: Input an arbitrary 3-digit code.

#### **Displayed value compensation**

The displayed value can be corrected within  $\pm 20\%$  R.D. of the displayed value at the time of shipment.

#### Forced output

The output can be fixed to an ON/OFF state when starting the system or during maintenance. This enables the confirmation of the wiring and prevents system errors due to unexpected output.

#### Zero-clear of pressure value

The pressure value displayed on the sub screen can be cleared to zero.

*1 For details,	refer to the R	Relationship	Between D	splayed Value and *5 Ref	ers to when OUT2 is set to detect	the distance			
Distance on page 14.				*6 Ref	ers to when OUT2 is set to detect	the pressure			
*2 If hysteresis	s is set to 3 (D	Detault setti	ing), the "Dis	playable/Settable range" *7 If th	e applied pressure fluctuates arou	ind the set value, the hysteresis			
of the F type	e is limited to	57. If hyste	eresis is set i	io 20 (Default setting), must be set to a value more than the fluctuating width, otherwise chattering will occur					

\*3 The pressure value will be the indicated on the sub screen.

\*8 Only applies to the digital gap checker body excluding the control unit.

\*4 For details on the detection nozzle, refer to the figures on page 14.

#### **Rated Distance Range and Displayable/Settable Range**

### **A**Caution

The displayed value is a reference value obtained by converting the distance between the workpiece and the detection surface into a digital numerical value. It is not displayed in units.

For details, refer to the Relationship Between Displayed Value and Distance on page 14.

Rated distance range: Distance range within which the product meets the specifications

Displayable/Settable range: Range within which it is possible to display or set values, (Not guaranteed to meet the specifications)

Model	Distance						
WOUEI	0 mm 0.02 mm	0.05 mm	0.15 mm	0.30 mm	0.50 mm		
ISA3-F type							
ISA3-G type		1					
ISA3-H type							

Rated distance range

Displayable/Settable range

#### **Supply Pressure Dependence Characteristics**

The distance for the product to turn ON varies depending on the supply pressure.

The graphs below show the variation of the distance for the product to turn ON, for 3 types of gap, by changing the supply pressure (±50 kPa) when the product is set to turn ON at 150 kPa supply pressure.

\* Use within the rated pressure range (100 kPa to 200 kPa).

It will be impossible to measure the gap when the operating pressure is less than 80 kPa or over 220 kPa. And the output will be OFF. (Refer to the Relationship Between Supply Pressure and Display on page 22.)

#### **Response Time**

Response time is the elapsed time between the pressure supply and the turning ON of the switch output.

The response time varies depending on the piping length from the OUT port to the detection nozzle, and the seating condition of the workpiece. The graphs below show the response time when the workpiece is approached at 90% distance and 0% distance (close contact). (\* The switch point is 100% distance.)

(Example: When the switch point is set to 0.1 mm, the response time when the workpiece is at 0.09 mm and 0 mm are measured.)

#### **Relationship Between Displayed Value and Distance**

The graphs below show the relationship between the displayed value and distance.

 The data shown below are for reference. They change depending on the individual product differences, machining

dimensions of the nozzle, etc.

ISA3-H

\* Values of 9 and under are displayed as "0."

#### **Detection Nozzle Shape**

The nozzle shape must be similar to Fig. 1. Do not chamfer the nozzle as shown in Fig. 2, as the characteristics will be affected.

Fig. 1: Recommended nozzle shape

Fig. 2: Unsuitable nozzle shape

**Internal Circuits and Wiring Examples** 

\* Refer to the **Web Catalog** for wiring details of the VX2 series (2-port solenoid valve).

**SMC** 

#### **Construction Diagram**

#### **Construction Diagram**

If there is a possibility that the atmospheric vent port of the gap checker will be exposed to water or dust, insert a tube into the atmospheric vent port and route the other end of the tube to a safe place away from water or dust.

\* For tubing, please use the SMC TU0425 (polyurethane, O.D. ø4, I.D. ø2.5) for the gap checker.

#### 

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

#### Parts List

\*1 Spacers are included for 4 and 6 stations.

Right angle 5 m

**ISA-20** 

\* With 2 mounting screws (M3 x 16L)

#### Parts List (Control Unit)

\*1 The pressure gauge port is 1/8. The pressure gauge is included in the package, but not assembled.

\*2 This product is for overseas use only according to the New Measurement Act.

(The SI unit type is provided for use in Japan.)

For details, refer to the Web Catalog.

#### **Error Indication**

Main screen	Name	Description	Measures	
	Supply pressure error	Displayed when supply pressure is outside the range of 80 kPa to 220 kPa. Measurement is not possible.	Supply rated pressure (100 kPa to 200 kPa). The product will return to measurement mode automatically.	
	Outside of the displayable range (Switch point change mode)	The workpiece is outside the displayable range.	Move the workpiece closer to the detec- tion nozzle.	
Er l	OUT1 over current error	The switch output (OUT1) load current has exceeded 80 mA.	Turn the power OFF and remove the cause of the over current. Then turn the power ON again.	
Er 3	Zero clear error	Zero clear was not performed at atmospheric pressure. (Pressure outside of $\pm 14$ kPa was supplied present.)	Perform zero clear at atmospheric pres- sure.	
ErO				
Er4 to Er9	System error	An internal data error has occurred.	Turn the power OFF and turn it ON again.	
Sub screen	Name	Description	Measures	
ННН	Supply pressure error (When [SUP side pressure	Pressure exceeding 220 kPa is supplied.	Keep the supply pressure within the dis-	
LLL	value display] is set to the sub screen)	Vacuum pressure (less than -20 kPa) is supplied.	playable range of –20 kPa to 220 kPa.	

#### Relationship Between Supply Pressure and Display

#### ▲ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "**Caution**," "**Warning**" or "**Danger**." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)<sup>\*1</sup>, and other safety regulations.

- Caution: indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.
- Warning: Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

**Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

#### **A**Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- 3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.
  - The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
  - 2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
  - 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

## 4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

- 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
- 2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
- An application which could have negative effects on people, property, or animals requiring special safety analysis.
- 4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

- \*1) ISO 4414: Pneumatic fluid power General rules relating to systems.
  - ISO 4413: Hydraulic fluid power General rules relating to systems. IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)
  - ISO 10218-1: Manipulating industrial robots Safety. etc.

#### 

 The product is provided for use in manufacturing industries. The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand

and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

#### Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".

Read and accept them before using the product.

#### Limited warranty and Disclaimer

- The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.\*2) Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

#### **Compliance Requirements**

- The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

#### 

### SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.
