## Compact Digital Pressure Switch

## ZSE10(F)/ISE10 Series

## 3-step setting

## Improved visibility from multiple directions

The vacuum suction and burst pressure can be checked at a glance by indicator lights.

## Direct mounting

Panel mounting
Can be mounted closely in vertical direction.

Standardized 2-output type.
NPN or PNP open collector 2 outputs

- NPN or PNP open collector 1 output + Analog output (1 to 5 V )

## Resolution conversion function

The flickering on the display can be eliminated.

(Only the displayed value is changed, and there is no effect on the accuracy.)

## Secret code setting function

A function to prevent operation by anyone other than the designated operator while the keys are locked.

$\qquad$ An optional 3-digit value is entered.
The set-value can be checked while the keys are locked.)

## Power-saving function

The display can be turned off to save the power consumption.

Note 1) For piping specifications 01 and N01, the tight mounting or direct mounting cannot be made since the fitting interferes with the piping.
Note 2) When using the tight mounting or direct mounting, select an appropriate fitting while referring to the dimensions (pages 72 and 73 ).

| Bottom display function | Can retain the minimum pressure value displayed during measurement. |
| Keylock function (Selectable secret code) | Key operation can be locked to prevent any incorrect function of the operation switch. |
| Zero-clear function | The pressure display can be set at zero when the pressure is open to the atmosphere. |
| Anti-chattering function | Prevents possible malfunction due to sudden fluctuations in the primary pressure by adjusting the response time. |
| Display unit switching function | Can convert the display value. |
| Power-saving mode | Reduces power consumption. |
| Display resolution conversion function | Changes the display resolution from the default value 1000 to 100 . The flickering on the display can be eliminated. |
| kPa MPa conversion function | The unit can be changed between kPa and MPa. |

## Set Pressure Range and Rated Pressure Range

## Set the pressure within the rated pressure range.

The set pressure range is the range of pressure that is possible in setting.
The rated pressure range is the range of pressure that satisfies the specifications (accuracy, linearity, etc.) on the switch.
Although it is possible to set a value outside the rated pressure range, the specifications will not be guaranteed even if the value stays within the set pressure range.

| Switch |  | Pressure range |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## ZSE10(F)/ISE10 Series

## Function Details

## A Copy function (F97)

The settings of the master sensor can be copied to the slave sensors, reducing setting labor and minimizing risk of mistakes in setting.
Can copy to up to 10 switches simultaneously.
(Maximum transmission distance 4 m )

1) Connect the power supply and copy line as shown in the left figure.
2) Select the slave switch which is to be the master, and change it into a master using the buttons. (In the default setting, all switches are set as slaves.)
3) Press the button of the master switch to start copying.

## B Auto-preset function (F5)

Auto-preset function, when selected in the initial setting, calculates and stores the set-value from the measured pressure.
The optimum set-value is determined automatically by repeating vacuum and break with the target workpiece several times.
Suction Verification

## C Display calibration function (F6)

Fine adjustment of the indicated value of the pressure sensor can be made within the range of $\pm 5 \%$ of the read value.
(The scattering of the indicated value can be eliminated.)

Note) When the display calibration function is used, the set pressure value may change $\pm 1$ digit.

Formula for Obtaining the Set-Value

| P_1 or P_2 | H_1 or H_2 |
| :---: | :---: |
| P_1 (P_2) $=A-(A-B) / 4$ | $H \_1\left(H \_2\right)=\|(A-B) / 2\|$ |
| $n \_1\left(n \_2\right)=B+(A-B) / 4$ |  |

## D Peak/Bottom value indication

This function constantly detects and updates the maximum (minimum) value and allows to hold the maximum (minimum) pressure value.
When the $⿴ 囗 \Delta$ buttons are simultaneously pressed for 1 second or longer, while "holding", the hold value will be reset.

## E Keylock function

Prevents operation errors such as accidentally changing setting values.

## F Zero-clear function

This function clears and resets the zero value on the display of measured pressure.
For the pressure switch with analog output, the analog output shifts according to the indication. The indicated value can be adjusted within $\pm 7 \%$ F.S. of the pressure when ex-factory.
(ZSE10F (for compound pressure) $\pm 3.5 \%$ F.S.)

## I Display unit switching function (F0)

Display units can be switched with this function.

| Display unit | PA |  | GF | bAr | PSi | inH | mmH |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | kPa | $\mathrm{MPa}^{*}$ | $\mathrm{kgf} / \mathrm{cm}^{2}$ | bar | psi | inHg | mmHg |

| ZSE10F <br> (compound pressure) | 0.1 | 0.001 | 0.001 | 0.001 | 0.02 | 0.1 | 1 |
| ISE10 <br> (positive pressure) | 1 | 0.001 | 0.01 | 0.01 | 0.1 |  |  |

* The ZSE10 (vacuum pressure) and ZSE10F (compound pressure) will have different setting and display resolution when the unit is set to MPa.

## J Power-saving mode (F80)

Power-saving mode can be selected.
It shifts to the power-saving mode without button operation for 30 seconds. It is set to the normal mode (Power-saving mode is OFF.) when ex-factory. (Decimal points and operation indicator light (only when the switch output is turned ON.) blink in the power-saving mode.)

## K Setting of secret code (F81)

Users can select whether a secret code must be entered to release key lock. At the time of shipment from the factory, it is set such that the secret code is not required.
